

REVOLUTIONIZING WHAT MOBILE SHOULD BE

Technology isn't just how I get my entertainment, it is my entertainment. That's why I must have the most innovative device. My Revolution by LG is a major wow-machine. Superior speed is found when the 1GHz Snapdragon™ Processor and LG's 4G LTE modem combine with Verizon's 4G LTE Network. This power-trio makes it possible to download movies and games in seconds, shoot HD videos and share them instantly, seamlessly multitask and browse the web. Honestly, after one day with this device, you'll see mobile technology in a whole new way.

Believe me, I don't fool around with second best, and this is one device that does not disappoint. Revolution's display is a glorious 4.3" of rich and clear color that literally ignites the screen. Images pop, punch, and shine! With the front-facing camera, I can video-chat with buddies, or that hottie I met in Vegas last weekend. Its HDMI output rocks my HD videos right onto my flat screen TV. Now that's the way I like it—fast, powerful, and simply supreme.

Multitasking Master

Mighty processing combines with 4G capability to pump out blazing fast speeds, making it possible to browse, email, and stream while talking on the phone, or in other words, use both voice and data simultaneously.

Innovative Imaging

Show off the complete 720p HD solution with recording, playback, and streaming on the 4.3" display. Revolution was thoughtfully designed with your viewing pleasure in mind.

Streamlined Sharing

Have an epic weekend? Quickly share the memories via HDMI® output to an HDTV, or SmartShare (media sharing by DLNA®).

Personal Connection

When the to-do list grows increasingly longer and free time is downsized, directly connect with the people you care about most with face-to-face video chat on the front-facing camera.

Exceptional Entertainment

Whether streaming movies or TV shows via Netflix®, jammin' out to Rock Band®, or picking up sweet sounds with Dolby® Mobile, Revolution turns a mobile moment into a mobile extravaganza.
