

LG Electronics Conflict Minerals Due Diligence Report

*Reporting Period: January 1, 2023, through December 31, 2023
(July 2024)*

Introduction

LG Electronics (“LGE”) is a global leader and technology innovator in consumer electronics, and home appliances, employing 73,000 people working in 140 locations around the world. LGE comprises four main business units — Home Appliance & Air Solutions, Home Entertainment, Vehicle component Solutions, and Business Solutions — and is one of the world's leading producers of flat panel TVs, air conditioners, washing machines, and refrigerators.

While LGE does not purchase raw ore or unrefined minerals directly from mines or metal processors, metals including tin, tungsten, tantalum, and gold (3TG) are included in some of the materials, parts, or components that LGE purchases from first-tier suppliers which then end up in our products. Consistent with LGE’s Better Life for All vision, LGE is committed to conducting business in an ethical, socially, and environmentally responsible way and has implemented a conflict minerals management system for 3TG and has initiated efforts to help advance responsible sourcing of cobalt.

Due Diligence Process Design

LG Electronics has designed its conflict minerals management system to align with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD Guidance). In addition, LGE is a member of the Responsible Business Alliance (RBA) and the Responsible Minerals Initiative (RMI) to further support alignment of its programs to international standards, industry best practices, and in support of in-region conflict-free supply chains.

Following the OECD Guidance, LGE’s conflict minerals program is designed appropriate to its position as a downstream company in the minerals supply chain and follows the OECD 5-step framework:

1. Establish strong company management systems
2. Identify and assess risk in the supply chain
3. Design and implement a strategy to respond to identified risks
4. Carry out independent third-party audits of supply chain due diligence
5. Report on supply chain due diligence

1. Establish Strong Company Management System

LGE Conflict Minerals Policy

Pursuant to LGE’s conflict minerals policy, LGE carries out due diligence with relevant suppliers consistent with the OECD Guidance and we encourage our suppliers to do likewise with their own suppliers.

All direct suppliers must document their efforts to determine and provide evidence as to the origin of minerals defined as “conflict minerals,” i.e., tin, tungsten, tantalum, gold (3TG) in materials supplied to LGE. As part of this process, direct suppliers must register conflict minerals information on LGE’s IT system or they are prohibited from supplying their materials and parts to LGE. Starting in 2020, LGE began supply chain

traceability for cobalt by surveying suppliers of materials containing cobalt.

LGE also encourages smelters and refiners to participate in third party independent conflict- free/responsible sourcing validation programs, such as the Responsible Minerals Assurance Process (RMAP) or mutually recognized assurance mechanisms, in direct annual communications and in cooperation with our suppliers and partner companies. In addition, in 2018 LGE announced its goal to source from only from RMAP conformant smelters and refiners for 3TG by 2021 (2019 for tantalum and tungsten; 2020 for tin; and 2021 for gold). LGE is constantly working with its suppliers to maintain its 100% RMAP conformant sourcing policy.

LGE Internal task team

LGE established a global cross-functional team to support responsible mineral sourcing consisting of representatives from Compliance, Procurement, Sales, and ESG. To ensure conflict minerals compliance and program implementation are effective, the task team undertakes the following measures:

- Streamlined communication via LGE's conflict-mineral@lge.com email address, which is also publicly posted on LGE's global conflict minerals website.
- Membership in RMI, including regular attendance of RMI working groups (Due Diligence Practices Team, Smelter Engagement Team, Minerals Reporting Template Team) and use of RMI materials to support reasonable country of origin determination and due diligence activity. The RMI provides its members with regularly updated information on conflict-free smelters and refiners, tools for gathering mineral sourcing information, and offers a forum for exchanging best practices to address conflict mineral issues. The RMI has also implemented a Grievance Mechanism that is available to members to help identify mineral supply chain risk.
- Weekly team updates and monthly status reports for customer compliance reporting, and relevant activities related to regulations, RMI tools/resources, international forum, and NGOs and/or media coverage or inquiries.
- Bi-annual program evaluation to assess and review programs and recommend improvement measures.
- Top management reporting, at least annually, to communicate program effectiveness, customer request trends, risks of concern, and to request support as needed.

LGE Standard of Conflict Minerals Management

The LGE Standard of Conflict Minerals Management (the Standard) was created in 2015 and serves as the company's internal reference to carry out the requirements and work processes associated with LGE's conflict minerals management system. The Standard is designed to support LGE in providing information to customers for their compliance with United States conflict minerals requirements, as well as aligning with the OECD Guidance.

The Standard is implemented according to the roles and responsibilities of LGE's

conflict minerals task team and is reviewed and updated on a regular basis. It incorporates regular training requirements for suppliers and LGE responsible engineers at least once a year, as well as LGE division/subsidiary training as needed. In 2019, LGE's Standard was expanded to include steps for the responsible sourcing of cobalt to address social concerns related to cobalt mining (such as child labor), as well as integrating the company's commitment to source from only RMAP listed smelters and refiners for 3TG by 2021.

The scope of the Standard includes the parts, components, materials, and other articles that are procured by LGE, or by third parties to which LGE outsources the design and manufacture of its electronics products. This standard is applied to the following products transacted with LGE (collectively "LG Electronics supplied products"):

- All products designed, produced, sold, and supplied by LG Electronics
- Products designed and produced by the suppliers, but supplied to market with the trademark of LG Electronics attached (ODM part / model)
- Products designed by LG Electronics, produced by the suppliers, and supplied to market with the trademark of LG Electronics attached. (OEM part / model)

LGE Supplier Requirements

The LG Electronics' Supplier Code of Conduct stipulates what LGE requires from its suppliers so that they will implement a safe working environment, respect the human rights of their employees, fulfill their responsibilities to protect the environment, and operate their business ethically. Pursuant to Article 5 under the Code of Conduct, Suppliers shall establish and maintain a policy to ensure that conflict minerals (3TG) contained in products supplied to LGE do not directly or indirectly finance or benefit an armed group in the Democratic Republic of the Congo or an adjoining country. It also requires that the Supplier shall exercise due diligence on the source and chain of custody of conflict minerals (3TG) contained in LGE's products and provide due diligence measures to LGE upon request.

LGE's conflict minerals policy is regularly communicated to suppliers, as well as the smelters and refiners in LGE's supply chain, and LGE's Supplier Code of Conduct is incorporated by reference in LGE supplier contracts. LGE also conducts outreach to cobalt suppliers and refiners to raise awareness of the RMAP cobalt audit protocol and to request refiner audit participation.

2. Identify and Assess Supply Chain Risk

LGE collects materials content information of parts using an internally designed information technology database called the Hazardous Substances Management System (HSMS). For 3TG information, all LGE suppliers must submit the material information of the part before the part is supplied to LGE. Beginning in 2019, LGE began requesting that suppliers report cobalt information. When a supplier submits the material information of a part, the HSMS will automatically filter if the part contains 3TG or cobalt, and then provide the target part / supplier list for surveying conflict mineral or cobalt information in LGE's Conflict Minerals

Management System (CMMS).

Supplier 3TG information is collected using the industry standard for data exchange to identify smelters and refiners in LGE's supply chain, i.e. the RMI's conflict minerals reporting template, to conduct supply chain traceability and help reasonably identify country of origin sourcing. LGE requests that its suppliers refresh this information on an annual basis or whenever a new part is registered in the HSMS. LGE reviews and monitors its supplier's 3TG data using tools and resources available to LGE as an RMI member, such as RMAP conformant smelter/refiner status and Reasonable Country of Origin sourcing Information (RCOI), as well as other publicly available sources of information.

3. Respond to Supply Chain Risk

The LGE Standard of Conflict Minerals Management defines risk level criterion for 3TG and cobalt sourcing based on the metal, origin of sourcing and smelter information, and provides a framework for responding to identified risk. Based on the risk rating, LGE will request corrective action to mitigate risk with its suppliers, for example to require more accurate supply chain information, to demonstrate due diligence activities on source or chain of custody, or to remove high risk smelters/refiners from LGE's supply chain, if appropriate. If the supplier doesn't replace the smelter in a timely manner, LGE will take measures to replace the supplier. Risk identification and response is an ongoing process based on information as it becomes available, and conducted on a supply chain-wide basis two times per year concurrent with the preparation of LGE's biannual conflict minerals disclosure report which is reported to its customers.

4. Support Smelter/Refiner Due Diligence Practices via Audit and In-Region Support

LGE is a corporate member of the Responsible Minerals Initiative (RMI) which operates the Responsible Minerals Assurance Process (RMAP), a program that uses third party independent auditors to validate that participating smelters and refiners have adequate policies and due diligence processes in place to trace the origin of the minerals that they process and assess whether they were obtained from conflict free sources. LGE's membership to the RMI supports the implementation of smelter/refiner due diligence audits and promotes cross industry efforts to drive a conflict free global supply chain, enabling downstream companies, like LGE, to more confidently source conflict free minerals in the DRC and adjoining countries. In 2020, LGE supported the RBA Foundation Initial Audit Fund, contributing additional funding to support smelters and refiners in completing due diligence audits.

5. Report Annually on Supply Chain Due Diligence

LGE reports the progress and status of its conflict minerals management program, and other responsible mineral sourcing activity, annually in LGE's Global Sustainability Report, and makes regular updates to LGE's global conflict minerals website page. In addition, LGE annually publishes this supplemental report on our

due diligence activities, the LGE Conflict Minerals Due Diligence Report, on the LGE conflict minerals website.

Steps to Improve Future Due Diligence Measures

LGE strives for annual continuous improvement in its conflict minerals management program, including improving supplier response rate and increasing the percentage of RMAP conformant smelters and refiners in LGE supply chain. In 2018, LGE announced a target to use only 100% RMAP conformant smelters/refiners by 2021 and in order to maintain the goal, LGE is constantly working closely with its suppliers to update SOR information with the most up-to-date status.

In 2021, LGE took steps to improve the responsible sourcing of cobalt including initiating supply chain surveying and encouraged cobalt refiners in our supply chain to participate in RMAP process for cobalt refiners. The effectiveness of survey and traceability activities has been assessed at the end of 2019 and improvement measures ongoing. Starting 2022, all cobalt information from suppliers undergoes assessment for data consistency improvements.

*Although LGE achieved its rigorous goal of only sourcing from 100% RMAP conformant SORs for tantalum and tungsten (2019), tin (2020), and gold (2021), this information reflects smelter data to the best of our knowledge as of the effective date of the due diligence report and tends to vary over time and as new information comes in from our relevant suppliers. (e.g., Conformant SORs may stop operations, don't go through re-audits which may result in not conformant status). LG Electronics is a member of the Responsible Minerals Initiative and relies upon the RMI to collect and review sourcing information for validated smelters and makes no representations or warranties as to the accuracy of this information.

2023 Due Diligence Results

2023 RMI Status of Reported Smelters/Refiners (306 Total)
(Based on information available from RMI as of July 2024)

2023 RMI Status of Reported Smelter/Refiner Status by Metal
(Based on information available from RMI as of July 2024)

The RMAP classifies audit status in the following manner:

- Conformant: Smelter or Refiner (SOR) has been audited and found to conform with the relevant audit protocols, including RMAP, LBMA, or RJC
- Data Hygiene: SORs that are no longer in LG’s supply chain
- Not conformant – LGE has grouped various RMAP classifications into this category for not conformant SORs and these SORs are currently in process of removing from supply chain (i.e., non-conformant, outreach required, in communication, etc)

LGE Smelter/Refiner List (As of July 2024)

Metal	Official Smelter Name	Smelter ID	Smelter Country	Audit Status	Current Status (As of July 2024)

Inspection status of Conflict minerals in the Supply Chain

We collected the conflict mineral information of our suppliers with the RMI's template (CMRT) and investigated the smelter and origins of conflict minerals with HSMS and CMMS.

No. of suppliers	2193
Inspection rate	100%
3TG-using suppliers	711
Response rate	97%
