

## **LG Electronics Conflict Minerals Due Diligence Report**

*Reporting Period: January 1, 2024, through December 31, 2024*

*(Nov. 2025)*

### **A. Introduction**

LG Electronics (“LGE”) is a global leader and technology innovator in consumer electronics, and home appliances, employing 75,000 people in 141 locations around the world. LGE comprises four main business units — Home Appliance Solution, Media Entertainment Solution, Vehicle Solution and Eco Solution — and is one of the world's leading producers of flat panel TVs, air conditioners, washing machines, and refrigerators.

While LGE does not purchase raw ore or unrefined minerals directly from mines or mineral processors, minerals including tin, tungsten, tantalum, and gold (3TG) are included in some of the materials, parts, or components that LGE purchases from first-tier suppliers which then end up in our products. Consistent with LGE’s Better Life for All vision, LGE is committed to conducting business in an ethically, socially, and environmentally responsible way. LGE has implemented a conflict minerals management system for 3TG and initiated efforts to help advance responsible sourcing of cobalt.

### **B. Due Diligence Process Design**

LG Electronics has designed its conflict minerals management system to align with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD Guidance). In addition, LGE is a member of the Responsible Business Alliance (RBA) and the Responsible Minerals Initiative (RMI) to further support alignment with international standards, industry best practices, and in support of in-region responsible minerals supply chains.

Following the OECD Guidance, LGE’s conflict minerals program is designed appropriate to its position as a downstream company in the minerals supply chain and follows the OECD 5-step framework:

1. Establish strong company management systems
2. Identify and assess risk in the supply chain
3. Design and implement a strategy to respond to identified risks
4. Carry out independent third-party audits of supply chain due diligence
5. Report on supply chain due diligence

#### **1. Establish Strong Company Management Systems**

##### **LGE Conflict Minerals Policy**

Pursuant to LGE’s conflict minerals policy, LGE carries out due diligence with relevant suppliers, consistent with the OECD Guidance, and we encourage our suppliers to do the same with their own suppliers.

All direct suppliers must document their efforts to determine and provide evidence to the origin of minerals defined as “conflict minerals,” which are tin, tungsten, tantalum, and gold (3TG) in materials supplied to LGE. As part of this process, direct suppliers must register conflict minerals information on LGE’s IT system, otherwise they are prohibited from supplying materials and parts to LGE. In 2020, LGE began tracing cobalt in the

supply chain by surveying suppliers of materials containing cobalt.

LGE encourages smelters and refiners to participate in third-party independent conflict-free/responsible sourcing validation programs, such as the Responsible Minerals Assurance Process (RMAP) or mutually recognized assurance mechanisms. Additionally, in 2018, LGE announced its goal to source from only RMAP Conformant smelters and refiners for 3TG by 2021 (2019 for tantalum and tungsten; 2020 for tin; and 2021 for gold). Conformant statuses may vary annually due to changes in market conditions and supply chain configurations. Therefore, LG Electronics conducts regular inspections and continuous management activities to maintain its 100% RMAP conformant sourcing policy.

Due diligence efforts in this report are based on information supplied to LGE. As a downstream company, LGE lacks direct visibility into the full supply chain. While reasonable steps were taken to identify smelters and refiners, the complexity of multi-tiered supply chains can make it difficult to be certain of all entities involved. Therefore, the list of reported smelters reflects the best understanding based on gathered information, but may not be definitively accurate for every tier of the supply chain.

\*Although LGE achieved its rigorous goal of only sourcing from 100% RMAP conformant SORs for tantalum and tungsten (2019), tin (2020), and gold (2021), this information reflects smelter data to the best of our knowledge as of the effective date of the due diligence report and tends to vary over time and as new information comes in from our relevant suppliers. (e.g., Conformant SORs may stop operations or not go through re-audits which may result in changes to a nonconformant status). LG Electronics is a member of the Responsible Minerals Initiative and relies upon RMI to collect and review sourcing information for validated smelters and makes no representations or warranties as to the accuracy of this information.

#### **LGE Internal Task Team**

To support responsible mineral sourcing, LGE established a global cross-functional team, consisting of representatives from Compliance, Procurement, Sales, and ESG teams. To ensure conflict minerals compliance and program implementation are effective, the task team undertakes the following measures:

- Streamlined communication via LGE's conflict-mineral@lge.com email address, which is also publicly posted on LGE's global conflict minerals website.
- Membership in RMI, including regular attendance of RMI working groups (Due Diligence Practices Team, Smelter Engagement Team, Minerals Reporting Template Team) and use of RMI materials to support reasonable country of origin determination and due diligence activity.
- Status reports for customer compliance reporting, and relevant activities related to regulations, RMI tools/resources, international forums, NGOs, and media coverage or inquiries.
- Regular program evaluation to assess programs and recommend improvement measures.
- Top management reporting to communicate program effectiveness, customer request trends, risks of concern, and request support as needed.

### **LGE Standard of Conflict Minerals Management**

The LGE Standard of Conflict Minerals Management (the Standard) was created in 2015 and serves as the company's internal reference to carry out the requirements and work processes associated with LGE's conflict minerals management system. The Standard is designed to support LGE in providing information to customers for their compliance with United States conflict minerals requirements, as well as aligning with the OECD Guidance.

The scope of the Standard includes parts, components, materials, and other articles that are procured by LGE, or by third parties to which LGE outsources the design and manufacturing of its electronics products. This standard is applied to the following products transacted with LGE (collectively "LG Electronics supplied products"):

- All products designed, produced, sold, and supplied by LG Electronics
- Products designed and produced by suppliers, but supplied to market with the trademark of LG Electronics attached (ODM part / model)
- Products designed by LG Electronics, produced by the suppliers, and supplied to market with the trademark of LG Electronics attached. (OEM part / model)

### **LGE Supplier Requirements**

The LG Electronics Supplier Code of Conduct stipulates what LGE requires from its suppliers so that they will implement a safe working environment, respect the human rights of their employees, fulfill their responsibilities to protect the environment, and operate their business ethically. Pursuant the Code of Conduct, Suppliers shall establish and implement policies aimed at preventing the use of materials and minerals sourced through any illegal and unethical means, and they shall abide by all applicable regulations.

Suppliers shall establish a management system for tantalum, tin, tungsten, gold (conflict minerals), and cobalt in the raw materials, parts, and products they supply to LGE in accordance with the OECD Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas. Suppliers are obligated to conduct due diligence on the origin and supply chain of 3TG minerals and cobalt present in the raw materials, parts, and products they supply to LGE. These materials and substances must originate from smelters and refiners certified by RMAP or other certification programs that meet the standards of the RMAP.

Upon LGE's request, suppliers must furnish the current statuses of relevant due diligence, and promptly provide due diligence results, including information on the origin, smelters, and refineries of 3TG minerals and cobalt contained in the raw materials, parts, and products supplied to LGE.

LGE's conflict minerals policy is regularly communicated to suppliers, as well as the smelters and refiners in LGE's supply chain, and LGE's Supplier Code of Conduct is incorporated by reference in LGE supplier contracts. LGE also conducts outreach to cobalt smelters and refiners to raise awareness of the RMAP cobalt audit protocol and to request refiner audit participation.

## **2. Identify and Assess Supply Chain Risk**

LGE collects information on the content of materials in parts supplied to LGE using an internal information database called the Hazardous Substances Management System (HSMS). For 3TG, all LGE suppliers must submit information on materials contained in parts supplied to LGE before the part is supplied. In 2019, LGE began requesting that suppliers report cobalt information.

Suppliers' 3TG information is collected using the industry standard for reporting, RMI's Conflict Minerals Reporting Template, to identify smelters and refiners in LGE's supply chain, conduct supply chain traceability, and help reasonably identify country of origin sourcing. LGE requests its suppliers to refresh this information on an annual basis or whenever a new part is registered in the HSMS.

LGE monitors suppliers' 3TG data using the resources available to LGE as an RMI member, such as the RMAP Conformant Smelter and Refiner List and Reasonable Country of Origin Inquiry (RCOI) data, as well as other publicly available sources of information.

## **3. Respond to Supply Chain Risk**

The LGE Standard of Conflict Minerals Management defines risk level criterion for sourcing 3TG and cobalt, based on the mineral, origin of sourcing, and smelter information, and provides a framework for responding to identified risk. Based on the risk rating, LGE will request corrective action to mitigate risk with its suppliers.

Risk identification and response is an ongoing process based on information as it becomes available and LGE is conducting inspection about supply chain two times per year to prepare LGE's biannual conflict minerals report.

## **4. Support Smelter/Refinery Due Diligence Practices via Audit and In-Region Support**

LGE is a corporate member of the RMI, which operates the RMAP. LGE's membership to RMI supports the implementation of smelter/refinery due diligence audits and promotes cross-industry efforts to drive a conflict-free global supply chain.

In 2020, LGE supported the RBA Foundation Initial Audit Fund, contributing additional funding to support smelters and refiners in completing due diligence audits.

## **5. Report Annually on Supply Chain Due Diligence**

LGE annually reports the progress and status of its conflict minerals management program and other responsible mineral sourcing activity in LGE's Global Sustainability Report. And LGE makes regular updates to LGE's global conflict minerals webpage. In addition, LGE annually publishes the LGE Conflict Minerals Due Diligence Report on the LGE conflict minerals website.

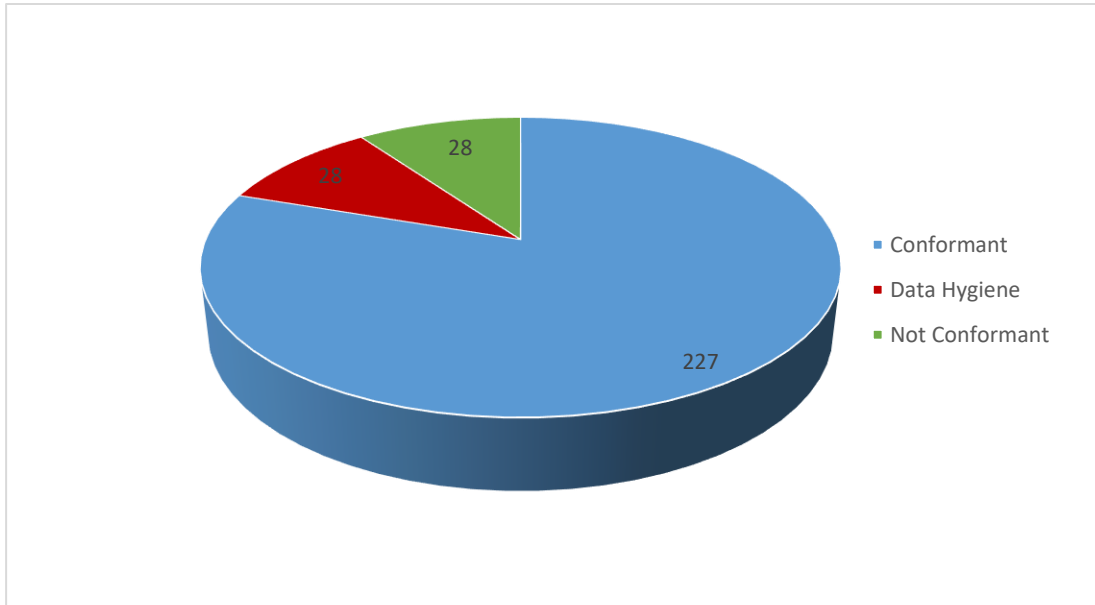

### **C. Steps to Improve Future Due Diligence Measures**

LGE strives for continuous improvement of its conflict minerals management program, including improving supplier response rate and increasing the percentage of RMAP Conformant smelters and refiners in LGE's supply chain.

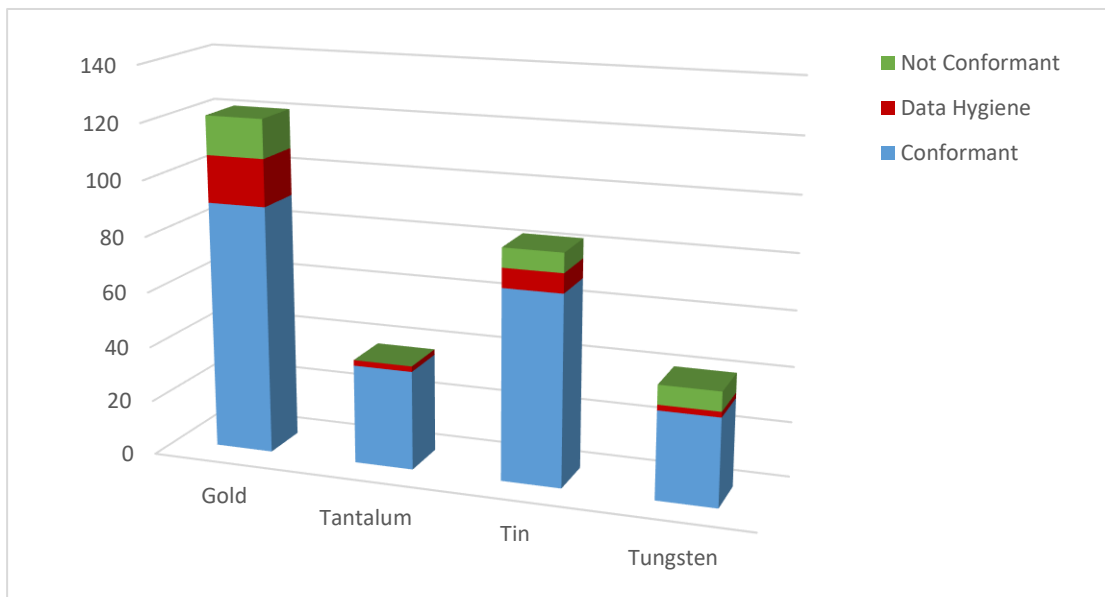

In 2021, LGE took steps to improve the responsible sourcing of cobalt, including initiating supply chain surveying and encouraging cobalt smelters and refiners in the supply chain to participate in RMAP.

### 2024 Due Diligence Results

**2024 RMI Status of Reported Smelters/Refiners (283 Total)**  
(Based on information available from RMI as of Apr. 2025)

**2024 RMI Status of Reported Smelter/Refiner Status by Metal**  
(Based on information available from RMI as of Apr. 2025)

RMAP classifies audit status in the following manner:

- **Conformant:** Smelter or Refiner (SOR) has been audited and found to conform with the relevant audit protocols, including RMAP, LBMA, or RJC
- **Data Hygiene:** SORs that are no longer in LGE's supply chain
- **Not conformant:** LGE has grouped various RMAP classifications into this category for nonconformant SORs, which LGE is currently in the process of removing from its supply chain (i.e., non-conformant, outreach required, in communication, etc.)

### LGE Smelter/Refiner List (As of Apr. 2025)

### Inspection Status of Conflict Minerals in the Supply Chain

We collected conflict mineral information from our suppliers with RMI's template (CMRT) and investigated the smelters and origins of conflict minerals with HSMS and CMMS.

No. of suppliers	2016
Inspection rate	100%
3TG-using suppliers	769
Response rate	99%
