Reduce and Reuse at Home

From your roof to your mailbox, these easy steps will save energy, help the environment and put some extra cash in your wallet.

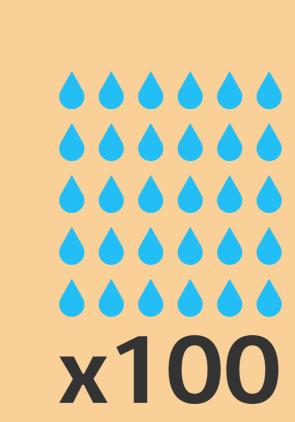

Go Solar! Homeowners with an average sized 4 KW solar power system may be able to slash their electric bills in half. That may add up to a savings of about \$675 per year, and over 20 years, that figure could reach \$13,500 — or more.¹ The easy-to-install LG NeON R has a sleek aesthetic while providing a high power output to power your home, even in limited space and shaded environments.

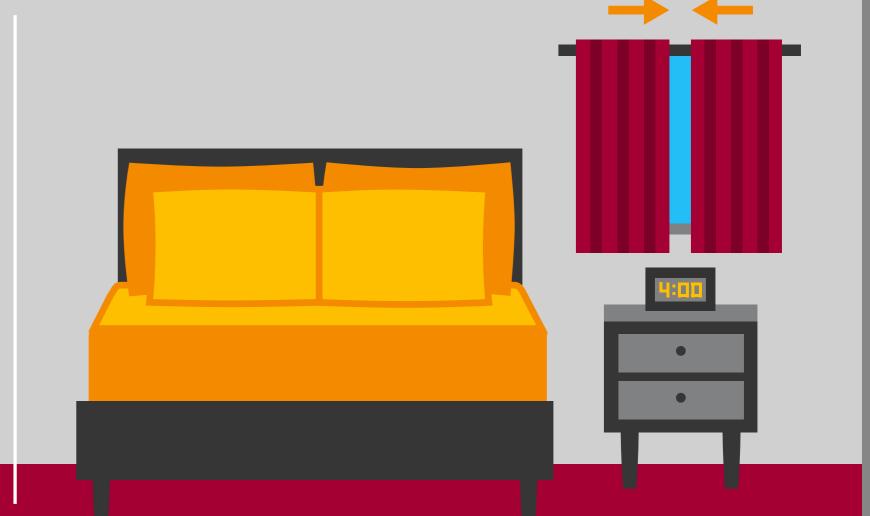

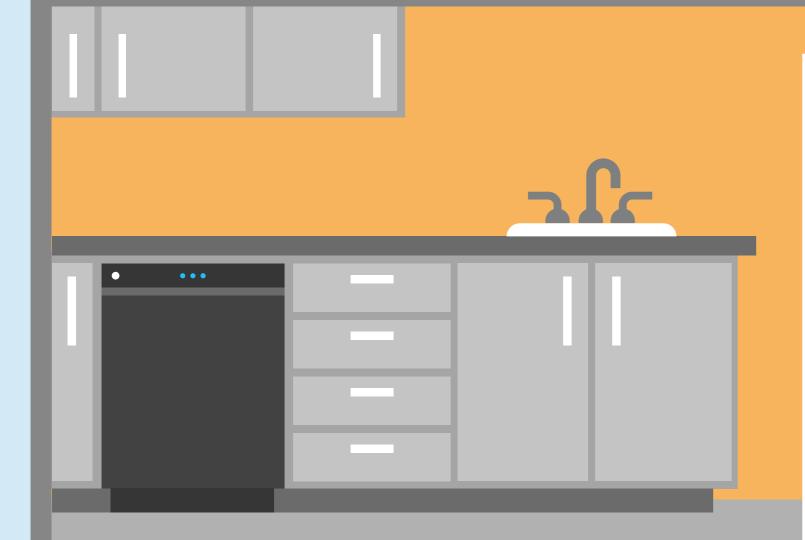

Drop a brick in your toilet. By placing a brick in your toilet tank you conserve about half a gallon per flush – averaging 3,000 gallons a year per household. Wrap it in a water proof bag to avoid sediment.

Use your curtains to keep the heat in or out. Almost half of American's energy consumption is used to heat and cool rooms.²

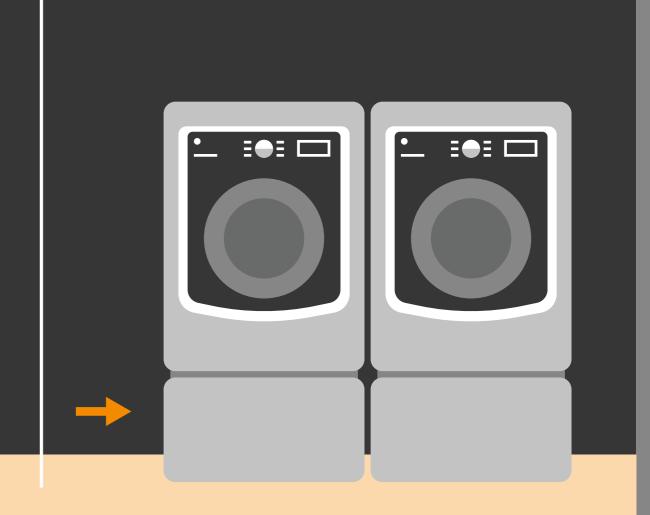

Clean your plate! Or only buy and prepare what you need. The average American wastes **238 pounds of food annually**, contributing to landfills and greenhouse gas emissions.³

25%++

45%+

Upgrade to a new ENERGY STAR washer and cut energy use by 25% and water use by 45% ⁴. And if you add the LG SideKick™, which fits in the pedestal of LG front-load washers, you can be more efficient with your time since it can wash two loads at once or independently.

2 2 4 1 POUNDS Get less junk mail. The average American receives 41 pounds of junk mail a year 5 – enroll in paperless billing or sign up to stop receiving those pesky flyers you never read.
