High Transparency

LG's OLED technology makes the Transparent OLED Touch Signage have slimmer structure without a backlight unit or a liquid crystal layer, achieving 33% transparency even with its P-Cap touch film. While clearly showing objects behind the screen, it overlays the relevant information in front, creating an amazing effect.

Accurate and Vivid Colors

Featuring self-lighting pixels, the display maintains vivid colors and a high contrast ratio even when the display becomes transparent. It brings content to life from wide viewing angles, and the content blends into its surroundings virtually seamlessly and naturally.

Protective Tempered Glass

To prevent potential damage or scratches, the tempered front glass protects product from such external impacts, and its anti-shatter glass is designed to minimize risk in the event of extreme damage.

Independent Design with a Stand

LG's standalone transparent display concept takes a step forward. The transparent OLED with a stylish stand maintains the tone and manner of the design in harmony with its surroundings rather than dominating your space.
