Flexible LED Display

With a specially designed flexible LED Display Module, the LCCM series supports true concave and convex curvature from 611R. The LCCM series also greatly amplifies design flexibility, providing users with the ability to create beautifully curved screens.

Creative LED Screen

Different from most display modules, the LCCM Series breaks free from the typical flat shape, allowing it to be designed in various curved configurations which allows highly creative content onscreen. In addition, the separate Power & Data Unit gives design freedom and advantages for creative installations.

Easy Installation & Maintenance

The easy-handling lightweight LED Display Module makes installation easy. Also, with various factors including magnets and positioning pins, the installers can easily install and dismantle the LED screen with dedicated tool, making it convenient to manage.

Compatibility with LG Software Solutions

Powered by LG's high performance system controller, the LCCM Series is compatible with LG software solutions including SuperSign CMS, LED Assistant, and ConnectedCare, which help customers operate their own business with excellent system awareness and control.

* CVCA controller required. Items that can be monitored by LG ConnectedCare include the following: Main Board (Temp, Signal Status, FPGA Ver, Ethernet Connection Status) and Receiving Card (Temp, LED Power).
