LG’s Bankability Landed Us On the Bloomberg Tier 1 Solar Manufacturer List

Every quarter, Bloomberg New Energy Finance lists solar companies they consider “Tier 1.” This honor is based on the companies’ bankability due to transparency, data availability, technical due diligence and other financial factors. LG is proud to be named on this exclusive Tier 1 list, but we’re not surprised.

LG’s global reputation as a solid, diversified brand that has been around for more than 50 years helps our solar customers feel confident in our financial strength. In an industry that unfortunately sees manufacturers come and go, it’s important that homeowners trust their brand choice. With LG, they know we will stand by our products. It helps that we offer a 25-year product, performance and labor* limited warranty.

When your customers ask, “Why LG?” you can stress our bankability. You can also tell them that:

- LG Solar modules offer high power output—up to 340W for NeON® 2 and 370W for NeON® R
- Our NeON® 2 modules can generate more energy in low-light environments than most 60-cell modules due to their double-sided cell structure (this includes late afternoons, when some utilities charge more for electricity through TOU rate plans)
- The high quality of LG Solar modules is backed by extensive tests in our in-house testing facility

*Labor costs in the rare case of a needed module repair or replacement are covered up to $450.
