

Did You Know?

LG Solar

Solar + Storage is Incentivized in Title 24

Solar panels generate electricity when the sun is shining, but homeowners still rely on the grid when their panels are inactive (such as at night). The new Title 24 building standards provide an incentive to install energy storage systems that can store solar energy for later use, such as the LG Electronics ESS.

Why is adding energy storage to new homes a good idea?

The new regulations provide a compliance credit for any battery storage system coupled with a PV system.

Including storage systems can reduce the number of solar panels needed to offset other efficiency measures in the regulations.¹

Your customers will be prepared for a potential demand spike when mandatory residential Time of Use (TOU) charges take effect in California: a great selling point.

You have an opportunity to gain an edge over your competitors by securing a solar partner now.
