Programming the Remote

The remote control is a multi-brand or universal remote control. It can be programmed to operate most remote-controllable devices of other manufacturers. Note that the remote control may not control all models of other brands.

Programming a code into a remote mode

1. Test your remote control. To find out whether your remote control can operate the component without programming, turn on the component such as a VCR and press the corresponding MODE button (VCR) on the remote control, while illuminating on the selected component. Test the POWER button to see if the component responds properly. If not, the remote requires programming to operate the device.

2. Turn on the component to be programmed, then press the corresponding MODE button on the remote control.

3. Press the MENU and MUTE buttons simultaneously for 2 seconds, the button selected component lights on the remote control. If you don't press any button for 20 seconds, the button selected component will turn off on the remote control. At a moment, you have to repeat from step 2.

4. Enter a code number using the number buttons on the remote. When pressing the button, the light is blinked at a time. Programming code numbers for the corresponding component can be found on the following pages. Again, if the code is correct, the device will turn off.

5. Press the MENU button to store the code. After blinking twice, this code is stored.

6. Test the remote control functions to see if the component responds properly. If not, repeat from step 2.

| **The remote control doesn’t work** | • Check to see if there is any object between the product and the remote control causing obstruction.  
  • Are batteries installed with correct polarity (+ to +, - to -)?  
  • Correct remote operating mode set: TV, VCR etc.?  
  • Install new batteries. |
| **Power is suddenly turned off**   | • Is the sleep timer set?  
  • Check the power control settings. Power interrupted  
  • No broadcast on station tuned with Auto off activated. |

### The video function does not work.

Maintenance

- Early malfunctions can be prevented. Careful and regular cleaning can extend the amount of time you will have your new TV. Be sure to turn the power off and unplug the power cord before you begin any cleaning.

Cleaning the Screen

1. Here’s a great way to keep the dust off your screen for a while. Wet a soft cloth in a mixture of lukewarm water and a little fabric softener or dish washing detergent. Wring the cloth until it’s almost dry, and then use it to wipe the screen.  
2. Make sure the excess water is off the screen, and then let it air-dry before you turn on your TV.

Cleaning the Cabinet

To remove dirt or dust, wipe the cabinet with a soft, dry, lint-free cloth. Please do not use a wet cloth.

Extended Absence

⚠️ If you expect to leave your TV dormant for a long time (such as a vacation), it’s a good idea to unplug the power cord to protect against possible damage from lightning or power surges.
