## APPENDIX

### TROUBLESHOOTING

For the problems listed below | Check the following areas
--- | ---
If Skype doesn't start | Check whether the Video Call Camera is properly connected to the USB port on the TV.  
| | Check the network connection status.
If the Notification Window is not displayed when a call is received | Check that your status is not set as "Do not disturb".  
| | When using certain TV functions, incoming calls can't be received (e.g. during a software update, etc.).  
| | Check 'Privacy Settings' is "Allow calls from people in my contact list only".
If there's echo (e.g. when you hear your own voice played back through the speakers) | Position the Video Call Camera at the top-center of your TV.  
| | Change the home theater audio setting to stereo rather than surround.  
| | Reduce the speaker volume.  
| | Too much echo in the room can decrease audio quality.  
| | Test microphone using the 'Echo / Sound Test Service'.
If you’re not able to receive any video or if it is of low quality | Internet or network congestion can degrade video quality.  
| | Using wireless can also degrade video quality. We recommend using a wired internet connection.  
| | Screen quality can decrease when using Zoom-In. We recommend you use minimum zoom during video calls.  
| | Check whether the call quality information is marked as "critical". If this is the case, video quality can be degraded.
If the call ends abruptly | When certain TV functions are activated, the call may be disconnected. (e.g. Sleep timer, etc.)  
| | Do not unplug the Video Call Camera during a call.
If the Skype menu does not appear on the Premium menu | Check whether your TV supports the Video Call Camera (see page 2).  
| | Connect the camera to your TV, then update the software. For details about how to update the software, refer to your TV manual.
Other issues | Issues may arise from network congestion of problems with the Skype network.  
| | For further inquiries about Skype functions, visit www.skype.com.
