---

**THANK YOU!**

Congratulations on your purchase and welcome to the LG family. Your new LG French Door Refrigerator combines advanced cooling technology with simple operation and high efficiency. Follow the operating and care instructions in this manual and your refrigerator will provide you with many years of reliable service.
IMPORTANT SAFETY INSTRUCTIONS

SAFETY MESSAGES

This manual contains several important safety notices. Always read and obey all of the following safety messages.

⚠️ This is the safety alert symbol. This symbol is a warning to potential dangers that could cause death, injury or damage to you, others or the product. All safety messages will follow after this warning symbol and the word "DANGER", "CAUTION" or "WARNING". These words mean:

**DANGER**
- You may be killed or suffer fatal damage if you do not follow instructions.

**WARNING**
- You may be killed or seriously injured if you do not follow instructions.

**CAUTION**
- Indicates a potentially hazardous situation which, if not avoided, may result in minor injury or damage to the product.

All safety messages inform you of potential danger, advise you on how to reduce the risk of injury and tell you what can occur if the instructions are not followed.

⚠️ WARNING

To reduce the risk of fire, electrical shock or personal injury, the following precaution measures should be followed:

- NEVER disconnect the refrigerator by pulling the power cord, always grip the plug firmly and disconnect it directly from the outlet.

- Repair or replace immediately all faulty or damaged service cables. Do not use cords that have cracks or abrasion damage on the length of the cord or on the plug.

- When moving your refrigerator, take care not to roll over the electrical cord.

- DO NOT store or use gasoline or other combustible liquids or vapors in proximity with this or any other electrical appliance.

- DO NOT permit children to climb, stand or swing from the doors or shelves of the refrigerator. This can cause serious injury to them and damage to the product.

- Keep your fingers away from areas in which they can become caught, such as the doors, hinges and cabinets. Be careful closing the doors when children are near.

- Unplug the refrigerator before cleaning or repairing.
  **NOTE:** We strongly recommend that any repair services be performed by a qualified professional.

- DO NOT store explosive substances such as aerosol cans with a flammable propellant in this appliance.

If the use of this unit is no longer needed, please contact local authorities to dispose of this product in a safe way due contains Pentane-cycle or pentane like gas for insulation. Insulation gases require a special elimination process. This product contains flammable insulation.

- Do not keep bottles in the freezer compartment, they could explode after freezing and cause damage.

- For your safety, this product should be properly grounded. Have a qualified professional check the electrical circuit and outlet to ensure a proper ground connection.

- Read all instructions before utilizing the product. Utilize this product only as explicitly expressed in this guide.

- Once the refrigerator is operating, avoid touching cold surfaces of the freezer with damp or wet hands; the skin could become adhered to these surfaces.

- In refrigerators with an automatic ice dispenser, avoid contact with moving parts of the ejector mechanism or with the heating mechanism that discharges the cubes. **DO NOT** place your fingers or hands in the ice dispenser mechanism while the refrigerator is connected.

- **DO NOT** refreeze foods which have already thawed. The United States Department of Agriculture in Home and Garden Bulletin No. 69 says:
  
  "...You may refreeze food that has thawed if they contain ice crystals or are cold and below 40°F (4°C)."

  "...Ground beef, perishable food or seafood that is discolored or has an unpleasant odor should not be frozen or consumed. Consumption of melted ice cream should also be avoided. If the odor or color of food is questionable, discard it. The food may be dangerous to consume."

  "Partial thawing or refreezing reduces the quality of the food, especially fruit, vegetables and prepared meals. The quality of red meat is less affected than other foods. Use refrozen products as soon as possible in order to maintain their quality."

- **This product contains chemicals known to the State of California to cause cancer. Wash hands after handing.**

KEEP THESE INSTRUCTIONS
CAUTION

This appliance is not intended for use by children, persons with physical or mental disabilities, persons with reduced sensory or mental capacity, or persons with lack of experience or know-how, unless they have supervision or instruction in relation to the use of the appliance by the person responsible for their safety. Children should be supervised to assure that they do not play with the appliance.

DANGER: CHILDREN MAY BECOME TRAPPED

Children becoming trapped or suffocated is not a problem of the past. Discarded and abandoned refrigerators are a hazard, even if they remain there “for just a few days”. If you would like to dispose of your old refrigerator, please follow the instructions below to prevent any accidents.

BEFORE DISPOSING YOUR REFRIGERATOR OR FREEZER WHEN NO LONGER IN USE:
• Remove the doors.
• Leave the shelves in place so that children cannot easily become stuck in them.

WARNING

Keep away from moving drawers.
• Small children can be knocked down.
• Fingers and toes can be injured.

Do not sit or climb on drawers.
• Refrigerator can tip over.

CFC DISPOSAL

Your old refrigerator may have a cooling system that uses CFC’s (chlorofluorocarbons). CFC affects the stratospheric layer of the ozone.

If you decide to throw out your old refrigerator, ensure that CFC contaminants are properly disposed of by a qualified professional. If you intentionally remove the CFC refrigerant, you could be subject to fines or prison in accordance with environmental legislation in effect.

REQUIREMENTS FOR GROUND CONNECTION

IMPORTANT: Attentively read the following.

TO CONNECT ELECTRICITY

WARNING

ELECTRICAL SHOCK HAZARD
FOR YOUR PERSONAL SAFETY, this appliance must be properly grounded. Have a qualified electrician check your wall outlet to ensure that the plug is grounded properly.

RECOMMENDED GROUNDING METHOD
Your refrigerator must always be plugged to its own outlet which is adequately grounded. The energy current should only be 115 V ~ 60 Hz, AC or 127 V ~ 60 Hz, AC (according to the National rating). This provides the best performance and prevents an overload which could cause a fire from the overheating of the cables.

It is recommended that a separate circuit be used for this appliance, as well as a receptacle that cannot be disconnected with a switch.

Do not use an extension cable. It is your responsibility and obligation to replace two-prong outlets with that of an adequately grounded three-prong outlet. Do not, under any circumstance, cut or extract the third prong from the plug.

NOTE: Before installation, cleaning or replacing light bulbs, you must disconnect the appliance from the power source. When finished, plug the appliance back in and adjust the thermostat to the desired position.

USE OF EXTENSION CABLES
We do not recommend the use of extension cables. However, if you still choose to utilize an extension cable, it is absolutely necessary that it is listed in the UL (in the United States) or CSA (in Canada), that it supports three-pronged plugs and that the electrical current support a minimum of 15 A and 120 V.

The use of an extension cable will increase the amount of space needed behind the refrigerator.

WARNING

REPLACING ELECTRICAL CABLE
If the power cord is damaged, it must be replaced by our service center or qualified LG technician to avoid any risk.
SPECIAL FEATURES

1 CONTROL PANEL LED DISPLAY SCREEN
Simple electronic controls are user-friendly. The LED screen shows refrigerator and freezer temperatures, displays water filter status, dispenser information, and more.

2 ICE PLUS
When this feature is activated, the freezer section will run at the coldest temperature for a 24-hour period to increase ice production.

3 FILTERED WATER AND ICE DISPENSER
The water dispenser offers fresh, chilled, filtered water through the door. The ice dispenser offers cubed or crushed ice.

4 DOOR ALARM
A warning alarm sounds at 30-second intervals when the refrigerator or freezer door is left open for more than 60 seconds.

5 SPACEPLUS ICE SYSTEM
The icemaker automatically produces 80-130 ice cubes in a 24-hour period to keep the ice dispenser fully supplied. The in-door design creates more shelf space.

6 CRISPERS
LG’s crispers preserve humidity and help vegetables stay crisp.

7 GLIDE’N’SERVE (In some models)
Provides storage space with a variable temperature control that keeps the compartment colder than refrigerator.

8 MULLION
The door mullion folds in when the left door is opened.

9 AUTO CLOSING HINGE
When you slightly push the door of the refrigerator, it is automatically closed. (The door is automatically closed within 30° of the opening angle.)

10 FRESH AIR FILTER
The Air Filter helps remove odors from the refrigerator.

NOTE: This guide covers several different models. The refrigerator you have purchased may have some or all of the items listed below. The locations of the features shown below may not match your model.
PARTS AND FEATURES

KEY PARTS AND COMPONENTS

In addition to the special features and components outlined in the Special Features section, there are several other important components that are referenced in this manual.

1. ADJUSTABLE REFRIGERATOR SHELVING
   The refrigerator compartment shelves are adjustable to allow flexibility for storage needs.

2. GALLON STORAGE BINS
   Three interchangeable bins can be arranged to suit your storage needs.

3. REMOVABLE ICE STORAGE BIN
   The ice storage bin can be removed to fill ice buckets, coolers, or pitchers.

4. LED INTERIOR LAMPS
   Refrigerator interior is lit by the LED array.

5. CAN STORAGE BIN

6. FIXED DOOR BINS

*7. FRESH AIR FILTER (on some models)
   The Fresh Air Filter helps remove odors from the refrigerator.

---

**Image of some components may vary by model**

**WARNING**

**EXCESSIVE WEIGHT HAZARD**

Use the assistance of two or more persons to move or install the refrigerator. Not following these instructions may cause injury to the back and other parts of the body.

**UNPACKING**

Before installing your refrigerator, remove any tape or temporary stickers. Do not remove any stickers that feature warnings, the model serial number or the technical label of the product located on the back of the refrigerator.

To remove adhesive tape residue, rub it well with your fingers and a little liquid detergent. Clean with warm water and let dry.

Do not use sharp instruments, rubbing alcohol, flammable liquids or abrasive cleaning products to remove the adhesive tape or glue. These products can damage the surface of your refrigerator. For more information, see the section on "Important Safety Instructions".

The shelves come already installed in their factory position. Remove the shelves and replace them according to your spacing needs.

**Moving Your Refrigerator:**

Your refrigerator is extremely heavy. Make sure you protect the floor when moving your refrigerator for cleaning or servicing. Always pull your refrigerator straight out when moving it. Do not shift from side to side or "walk" the refrigerator when attempting to move it as this can cause damage to the floor.

**WARNING**

**EXPLOSION HAZARD**

Keep all flammable materials and vapors (such as gasoline) away from the refrigerator. Not following these instructions may cause death, explosion or fire.

**INSTALLATION**

1. Avoid placing the unit near heat sources, direct sunlight, or humidity.
2. To avoid vibration, the unit should be leveled. If needed, adjust the leveling screws to compensate for an unleveled floor. The front should be slightly taller than the rear to ensure that the doors close properly. The leveling screws can easily be turned by slightly tilting the front of the refrigerator, turning the leveling screws clockwise (▲) to raise it and counter-clockwise (▼) to lower it.
3. Install the refrigerator in an area between 55°F (13°C) and 110°F (43°C). If the surrounding temperature is lower or higher than previously mentioned, it can adversely affect the unit.

**CAUTION:** Avoid placing the unit near heat sources, direct sunlight or humidity.

**ONCE INSTALLED**

1. Carefully clean your refrigerator and remove any dust accumulated during shipping.
2. Install accessories such as the ice bin, door racks, shelves, etc., in their proper places. These are already packed to prevent any possible damage during shipping.
3. Leave your refrigerator on for 2 to 3 hours before storing food inside. Verify that there is a flow of cold air in the freezer compartment to ensure proper cooling. Your refrigerator is now ready for use.

**WARNING:**

- Take care when working with the hinges, base cover and stops, etc. You may injure yourself.
- DO not place your hands or any tools in the air vents, the base cover or in the bottom of the refrigerator. This may cause injury or electrical shock.

Keep a Proper Distance from Adjacent Objects

Please keep the refrigerator at an adequate distance from other objects. Insufficient spacing can reduce the refrigerator’s freezing efficiency and increase electricity consumption.

**Note:**

This appliance is intended to be used in household and similar applications such as:
- Staff kitchen areas in shops, offices and other working environments;
- Farm houses and by clients in hotels, motels and other residential type environments;
- Bed and breakfast type environments;
- Catering and similar non-retail applications.
NOTE: It is always recommended that the doors be removed when it is necessary to move the refrigerator through a narrow opening. If it is necessary to remove the handles follow the directions below.

NOTE: Handle appearance may vary from illustrations on this page.

DOOR HANDLE REMOVING

1. Removing Refrigerator Handle

Loosen the set screws with the 3/32 in (2.5 mm) Allen wrench and remove the handle.

• NOTE: If the handle mounting fasteners need to be tightened or removed, use a 1/4 in (6.4 mm) Allen wrench.

2. Removing Freezer Drawer Handle

Loosen the set screws located on the lower side of the handle with the 3/32 in (2.5 mm) Allen wrench and remove the handle.

NOTE: If the handle mounting fasteners need to be tightened or removed, use a 1/4 in (6.4 mm) Allen wrench.

DOOR HANDLE INSTALLATION

1. Reinstalling Refrigerator Handle

Place the handle on the door by aligning handle footprints to fit mounting fasteners and tighten the set screws with a 3/32 in (2.5 mm) Allen wrench.

NOTE: If the handle mounting fasteners need to be tightened or removed, use a 1/4 in (6.4 mm) Allen wrench.

2. Reinstalling Freezer Drawer Handle

Place the handle on the door by aligning handle footprints to fit mounting fasteners and tighten the set screws on the bottom of the handle with a 3/32 in (2.5 mm) Allen wrench.

NOTE: If the handle mounting fasteners need to be tightened or removed, use a 1/4 in (6.4 mm) Allen wrench.
REFRIGERATOR INSTALLATION

HOW TO REMOVE AND INSTALL REFRIGERATOR DOOR

1. Removing Refrigerator Doors
   Remove the left-side door first.
   **NOTE:** Handle, top hinge and hinge cover appearance may vary from illustrations on this page.

**WARNING**
- Disconnect electrical supply to the refrigerator before installing. Failure to do so could result in death or serious injury.
- Do not put hands or feet or metal sticks into the air vents, base grille, or bottom of the refrigerator. You may be injured or receive an electrical shock.
- Be careful when you work with the hinge, base grille, and stopper. You may be injured.

♀ Left Door
- Pull the water tube out of the fitting while pressing the release ring on the fitting (1).
  **NOTE:** When you pull out the tube, first you have to push the collet by opposite direction of arrow in the upper picture and pull the tube out by direction of arrow.
- Open the door. Remove the top hinge cover screw (2).
- Use a flat blade screwdriver to lift the tabs on the front underside of the cover (3). Lift up the cover.
- Remove the cover. Pull out the tube (4).
- Disconnect all wire harness (5).
- Remove the grounding screw (6).
- Rotate hinge lever (7) counterclockwise. Lift the top hinge (8) free of the hinge lever latch (9).
- Place the door on a non-scratching surface with the inside up.

♂ Right Door
- Open the door. Remove the top hinge cover screw (10).
- Use a flat blade screwdriver to lift the tabs on the front underside of the cover (11). Lift up the cover.
- Rotate hinge lever (12) clockwise. Lift the top hinge (13) free of the hinge lever latch (14).
- Place the door on a non-scratching surface with the inside up.

**CAUTION:** When lifting the hinge free of the latch, be careful that the door does not fall forward.
- Lift the door from the middle hinge pin and remove the door.
- Place the door, inside facing up, on a nonscratching surface.
2. Refrigerator Door Reinstallation
Install the right-side door first.

- Right Door
  - Lower the door onto the middle hinge pin (1).
  - Make sure the door is aligned with the cabinet.
  - Fit the top hinge (2) over the hinge lever latch (3) and into place. Rotate the lever (4) counterclockwise to secure the hinge.
  - Hook the tab on the door-switch side of the cover (5) under the edge of the wire opening in the cabinet top.
  - Position the cover into place.
  - Insert and tighten the cover screw (6).

- Left Door
  - Lower the door onto the middle hinge pin (7).
  - Make sure the door is aligned with the cabinet.
  - Fit the top hinge (8) over the hinge lever latch (9) and into place. Rotate the lever (10) clockwise to secure the hinge.
  - Install the grounding screw (11) and connect all the wire harnesses (12).
  - Push the water supply tube (13) into the hole on the top case and pull it through the backplate.
• Insert the water supply tube into the connector.
• Insert the tube at least 5/8 in. (15 mm) into the connector.

• Hook the tab on the door-switch side of the cover under the edge of the wire opening in the cabinet top.
• Position the cover into place.
• Insert and tighten the cover screw.

⚠️ CAUTION

1. Insert the tube until you can see only one of the lines printed on the tube.
2. After inserting, pull the tube to ascertain that it is secure.
3. Assemble the clip.
HOW TO REMOVE AND INSTALL THE PULL OUT DRAWER

1. Removing Pull out Drawer

IMPORTANT: To avoid possible injury, product or property damage, you will need two persons to perform the following instructions.

To remove the drawer, push the tabs located on the front inside surface of each rail. Then gently lift the rear left and right sides of the drawer and pull it out (Fig. 1)

![Fig. 1]

To reinstall, pull out and fully extend both rails. Insert the end of rib in the bracket at left and right. Making sure that the guides at the front are lined up properly, gently push down on both sides (Fig. 2)

![Fig. 2]

- Pull the drawer open to full lower extension. Remove the durabase by lifting it from rail system. (Fig. 3)

![Fig. 3]

- Remove the screws of the rail on both sides. (Fig. 4)

![Fig. 4]

**CAUTION:** When removing drawer door, do not hold it by the handle. The door could fall down and you may be injured. Grasp the door with both hands as pictured below when removing.

**CAUTION:** When laying down the drawer, be careful not to damage the floor or hurt your feet with the sharp edges on hinge side.

- With both hands, hold both sides of the door (Fig. 5) and pull it up to separate it from the rails. (Fig. 6)

![Fig. 5]

![Fig. 6]
• Push the rails back into drawer cavity. With both hands, hold the center of the bar and push it in so that both rails go back simultaneously. (Fig. 7) (Fig. 8)

Fig. 7

Fig. 8

• Hook door supports into rail tabs. (Fig. 10)

Fig. 10

• Lower door into final position and tighten the screws. (Fig. 11)

Fig. 11

• With the rails pulled out to full extension, insert the durabase in the rail assembly. (Fig. 12)

Fig. 12

HOW TO REMOVE AND INSTALL THE PULL OUT DRAWER (CONT.)

2. Installing Pull out Drawer

IMPORTANT: To avoid possible injury, product or property damage, you will need two people to perform the following instructions.

• With both hands, hold the center of the bar and pull it out to let both rails out to full extension simultaneously. (Fig. 9)

Fig. 9

**WARNING:** To prevent accidental child and pet entrapment or suffocation risk, DO NOT allow them to play inside of drawer.

**WARNING:** DO NOT step or sit down on Freezer Drawer.
CLOSING AND ALIGNING THE DOORS

Closing the Doors
Your refrigerator has two front leveling screws, one on the right and one on the left. If your refrigerator seems unstable or if you would like the doors to close more easily, simply adjust the inclination of the refrigerator by following the instructions below:

1. Plug the refrigerator into a 3 prong grounded outlet. Move the refrigerator into its final position.

2. Use a flat head screwdriver to adjust the leveling screws, turning clockwise to raise the side of the refrigerator and counter-clockwise to lower it. It may take several turns to adjust it to the inclination you would like.

NOTE: Having someone push against the top of the refrigerator takes some weight off the leveling screws. This will make it easier to adjust the screws.

Aligning the Doors
To adjust the height of the doors, use the wrench (Included with the User Manual) to adjust the bolt in the door hinge (counter clockwise to raise or clockwise to lower)

3. Open both doors again and check to make sure that they close easily. If not, slightly tilt the refrigerator further back by turning both leveling screws clockwise. It may take several more turns. Make sure that you turn both leveling screws the same amount.

4. Ensure that the refrigerator is even by using a level.

NOTE: Your new refrigerator is uniquely designed with two fresh food doors. Either door can be opened or closed independently of one another. You may have to exert slight pressure on doors to get them to close completely.

When moving your refrigerator

Note: Your refrigerator is extremly heavy. When moving the refrigerator for installing, cleaning or service be sure to follow the next instructions.

1. Adjust leveling legs up.

2. Cover the floor with cardboard or hardboard to avoid floor damage.

3. Always pull or push the refrigerator straight out when moving it. Do not wiggle or “walk” the refrigerator when trying to move it, as floor damage could occur.

Image only for reference.
CONTROL PANEL FEATURES

NOTE: The shape of the buttons may not match your model.

1 LED DISPLAY
   The LED display shows the temperature settings, dispenser options, water filter, door alarm, and locking status messages.

2 ICE TYPE / ICE PLUS
   The ICE TYPE / ICE PLUS button is used to select Cubed Ice or Crushed Ice. Press and hold this button for at least 3 seconds to activate or deactivate the Ice Plus mode.

3 REFRIGERATOR BUTTON
   Press the REFRIGERATOR button to adjust the temperature in the refrigerator compartment.
   NOTE: When pressed simultaneously with the FREEZER button for more than five seconds, the temperature display will change from Fahrenheit to Celsius or vice versa.

4 FREEZER BUTTON
   Press the FREEZER button to adjust the temperature in the freezer compartment.
   NOTE: When pressed simultaneously with the REFRIGERATOR button for more than five seconds, the temperature display will change from Fahrenheit to Celsius or vice versa.

5 FRESH AIR FILTER BUTTON
   (in some models)
   Press this button to control the Air Filter Function to remove odors from the refrigerator.
   Press and hold the FRESH AIR FILTER button for more than 3 seconds to reset the filter indicator after the air filter has been replaced.

6 LIGHT/WATER FILTER BUTTON
   The LIGHT / WATER FILTER button controls the lamp in the dispenser.
   Press and hold the LIGHT / WATER FILTER button for more than 3 seconds to reset the filter indicator after the water filter has been replaced.

7 DOOR ALARM/LOCK BUTTON
   Press this button to control the door-open alarm.
   Press and hold this button at least 3 seconds to lock or unlock all the other function buttons on the control panel, including operation of the dispenser.
THE LED DISPLAY
The LED display shows the temperature settings, dispenser options, water filter, door alarm, and locking status messages.

1 **DISPENSER SELECTION INDICATOR**
Shows Cubed ice or Crushed Ice selection that will be dispensed when the push switch is pressed.

2 **REFRIGERATOR TEMPERATURE**
Indicates the set temperature of the refrigerator compartment in Celsius or Fahrenheit.

3 **FREEZER TEMPERATURE**
Indicates the set temperature of the freezer compartment in Celsius or Fahrenheit.

4 **ICE PLUS**
When the ICE PLUS button is pressed, the display will indicate the selected function has been activated.

5 **DISPENSER LIGHT INDICATOR**
When the LIGHT button is pressed, the display will indicate the selected function. The dispenser light is on, this indicator will appear on the display panel.

6 **DOOR ALARM INDICATOR**
This indicator shows that the door-open warning alarm is activated.

7 **AIR FILTER BUTTON (on some models)**
This indicator shows the air filter is activated.

8 **WATER FILTER STATUS**
This indicator shows the current status for the water filter. See Resetting the Filter Indicator.

9 **LOCK STATUS**
This indicator shows the current status for the control panel functions is set to LOCK.

---

⚠️ CAUTION

Display mode setting and its cancellation
- With the refrigerator door open, keep pressing the REFRIGERATOR button and ICE TYPE / ICE PLUS button more than 5 seconds, then it goes to the display mode.
  (Display will show the word “OFF”).
- Perform the same way again to cancel the display mode.
- All freezing units do not work at the display mode.
USING YOUR REFRIGERATOR

ADJUSTING THE TEMPERATURES AND DISPLAY

Adjust Freezer Temperature
To adjust the temperature in the freezer compartment, press the FREEZER button to cycle through the range of available settings.

![Freezer Temperature](image)

Adjust Refrigerator Temperature
To adjust the temperature in the refrigerator compartment, press the REFRIGERATOR button to cycle through the range of available settings.

![Refrigerator Temperature](image)

NOTE: The actual inner temperature varies depending on the food status, since the indicated temperature setting is the target temperature and not the actual temperature within the refrigerator. Initially set the REFRIGERATOR CONTROL at 37 °F (3°C) and the FREEZER CONTROL at 0°F (-18°C). Leave them at these settings for 24 hours (one day) to stabilize. Then adjust the compartment temperature as illustrated above.

TEMPERATURE DISPLAY
To change the temperature display from Fahrenheit to Celsius:
- Simultaneously press and hold the FREEZER and REFRIGERATOR buttons for more than 5 seconds.
- Do the same to convert back to Fahrenheit.

![Temperature Display](image)

POWER SAVING MODE (in some models)
- The display will remain off until the next time the door is opened.
- The display will also turn on when any button is pressed, and it will remain on for 20 seconds after the last door opening or button selection.
- To deactivate the Power-Saving Mode, press the FREEZER and ICE TYPE / ICE PLUS buttons simultaneously and hold them for 5 seconds until the tone sounds.

NOTE: Power Saving Mode function is set on the product.

![Power Saving Mode](image)

CAUTION WHEN CLOSING THE DOOR

![Door Handle](image)

CAUTION
To reduce the risk of door scratches, please make sure that the refrigerator door mullion is always folded in.
OPERATING THE DISPENSER

DISPENSING CRUSHED ICE

Press the ICE TYPE / ICE PLUS button to illuminate the Crushed Ice icon. Press the push ice switch with a glass or other container and crushed ice will be dispensed.

DISPENSING CUBED ICE

Press the ICE TYPE / ICE PLUS button to illuminate the Cubed Ice icon. Press the push switch with a glass or other container and cubed ice will be dispensed.

NOTE: Hold the glass or other container in place for a couple of seconds after dispensing ice or water to catch the last few cubes or drops. The dispenser is designed to not operate while either refrigerator door is open.

⚠️ CAUTION

- When filling container with a small opening, place the container as close as possible to the opening on the water or ice dispenser.
- Do not dispense ice into fine china or crystal glasses. China or crystal can break.

CONTROLLING THE DISPENSER LIGHT

Press the LIGHT / WATER-FILTER button to turn the dispenser light on and off.
USING YOUR REFRIGERATOR

SETTING THE FUNCTIONS

SETTING THE DISPENSER LOCK

Press and hold the DOOR ALARM / LOCK button for three seconds to lock the dispenser and all of the other control panel functions. Press and hold again for 3 seconds to unlock.

ACTIVATING ICE PLUS

Press by 3 seconds the ICE TYPE / ICE PLUS button once to activate the ICE PLUS function. The ICE PLUS icon on the display panel will illuminate when activated.

The ICE PLUS function runs the freezer compartment at the coldest setting for a 24-hour period to increase icemaking by up to about 20%, and then turns off automatically.

NOTE: Press the button again to deactivate the ICE PLUS function.

SETTING THE DOOR ALARM

The DOOR ALARM / LOCK button also controls the door alarm that sounds three times in 30-second intervals when a compartment door is left open for more than 60 seconds. The alarm stops sounding when the door is closed.

Press the DOOR ALARM / LOCK button once to activate and deactivate the door alarm function.

NOTE: Contact your local service center if the alarm continues to sound after the doors are closed.

RESETTING THE FILTER INDICATOR

Press and hold the LIGHT / WATER FILTER button for more than 3 seconds to reset the filter indicator after the water filter has been replaced.

NOTE: It is recommended that the filter be replaced when the indicator light on the front dispenser reaches 0. If the water or ice cube taste starts to deteriorates.

ACTIVATING FRESH AIR FILTER

The FRESH AIR FILTER has two settings, Auto and MAX. In Auto mode, the Air Filter will cycle on and off in increments of ten minutes on and 110 minutes off.

If set to the MAX mode, the Air Filter will stay on continuously for four hours, cycling on and off in increments of ten minutes on and five minutes off.

After four hours, the Air Filter will switch to Auto mode.

• Auto mode is the default mode.

• Press the Air Filter button once for MAX mode.

When the REPLACE icon turns on, the air filter needs to be replaced. After replacing the air filter, press and hold the Air Filter button for 3 seconds to turn the icon light off. It is recommended to change the air filter approximately every six months.

DIAGNOSTIC FAILURE DETECTION

The diagnostic function automatically detects problems with your refrigerator, and a diagnostic code will appear in the display. NOTE: If a diagnostic code appears in the display during use, note the code and call your Service Center. Refer to the Warranty Card to obtain the telephone number of the Service Center near you.
CAUTION

- Keep hands and tools out of the ice compartment door and dispenser chute. You could break something or injure yourself.

The icemaker will stop producing ice when the ice bin is full. If you need more ice, empty the ice bin into the extra ice bin in the freezer compartment so the icemaker can keep producing ice.

Shake the ice bin occasionally to level the ice in it. Sometimes the ice piles up near the icemaker, causing the icemaker to misread the amount of ice cubes and stop producing ice.

NOTE: Storing cans or other items in the ice bin may damage the icemaker.

Keep the ice compartment door closed tightly. If the ice compartment door is not closed tightly, the cold air in the ice bin will freeze food in the refrigerator compartment. This could also cause the icemaker to not produce ice.

NOTE: If the On/Off switch on the icemaker is set to Off for an extended time, the ice compartment will gradually warm up to the temperature of the refrigerator compartment. To prevent ice cubes from melting and leaking from the dispenser, ALWAYS empty the ice bin when the icemaker is set to Off for more than a few hours.

CAUTION

While you handle the ice bin, keep your hands out of blade. The blade has sharp edges could cause injury.

NOTE: To open or close the ice room compartment, push or pull on the handle.

To remove the in-door ice bin, grip the front handle, slightly lift the lower part, and slowly pull out the bin as shown.

To reinstall the in-door ice bin, slightly slant the bin during replacement to avoid contact with the icemaker.

NOTE: Avoid touching the Ice-detecting sensor when replacing the ice bin. See the label on the ice compartment door for details.
AUTOMATIC ICEMAKER

Ice is made in the automatic icemaker and sent to the dispenser. The automatic icemaker can make 10 or 12 ice cubes (depending on your device) at a time, above 100 cubes per 24-hour period. This quantity may vary by circumstance, including freezer compartment temperature, room temperature, number of door openings, freezer load, and other operating conditions.

- It takes about 12 to 24 hours for a newly installed refrigerator to make ice.
- Icemaking stops when the ice storage bin is full.
- To turn off the automatic icemaker, set the icemaker switch to OFF (O). To turn on the automatic icemaker, set the switch to ON (I).
- The water pressure must be 20 and 120 psi on models without a water filter and between 40 and 120 psi on models with a water filter to make normal amount and size of icy.

NOTE: It is normal that a noise is produced when ice drops into the ice storage bin.

- Even when the water pipe is not connected and the Ice Maker is turned on, the water valve operates. The noise is generated because the water pipe is not connected, which does not mean the icemaker is defective.

WARNING

Personal Injury Hazard

- DO NOT place fingers or hands on the automatic icemaking mechanism while the refrigerator is plugged in.

![5 cells icemaker](image)

![6 cells icemaker](image)

CAUTION

- The first ice may include particles or odor from the water feed line or the water tank.
- Throw away the first few batches of ice (about 20 pieces) and purge the water line for 2 minutes after installation to eliminate air and odd tastes.
- This is also necessary if the refrigerator has not been used for a long time.
- Never store beverage cans or other foods in the ice bin for the purpose of rapid cooling. Doing so may damage the icemaker or the containers may burst.
- If discolored ice is dispensed, check the water filter and water supply. If the problem continues, contact an Authorized Service Center. Do not use the ice or water until the problem is corrected.
- Keep children away from the dispenser. Do not allow children to play in or around dispenser.
- The ice passage may also become blocked with frost if only crushed ice is used. Remove the frost that accumulates.
- Never use thin crystal glass or crockery to collect ice.
- Such glasses or containers may break, and glass fragments could be in the ice.
- Dispense ice into a glass before filling it with water or other beverages. Splashing may occur if ice is dispensed into a glass that already contains liquid.
- Never use a glass that is exceptionally narrow or deep. Ice may jam in the ice passage and refrigerator performance may be affected.
- Keep the glass at a proper distance from the ice outlet. A glass held too close to the outlet may prevent ice from dispensing.
- To avoid personal injury, keep hands out of the ice door and passage.
- Never remove the dispenser cover.
- If you find ice or water dispensed unexpectedly, turn off the water supply and call your Service Center. Refer to the Warranty Card to obtain the telephone number of the Service Center near you (24 hours a day, 365 days a year).
ADJUSTING CONTROL SETTINGS
Give the refrigerator time to cool down completely before adding food. It is best to wait 24 hours before adding food to the refrigerator.

The mid-settings indicated in the previous section should be correct for normal household refrigerator usage. The controls are set correctly when milk or juice is cold to your liking and ice cream is firm. The refrigerator control functions as the thermostat for the entire appliance. The higher the number setting, the longer the compressor will run to keep the temperature colder. The freezer control adjusts the cold air flow from the freezer to the refrigerator. Setting the freezer control to a lower temperature keeps more cold air in the freezer compartment to make it colder.

If you need to adjust the temperature in the refrigerator or freezer, begin by adjusting the refrigerator first. Wait 24 hours after the refrigerator adjustment to check the freezer temperature. If it is too warm or too cold, then adjust the freezer control as well. Use the settings listed in the table below as a guide.

<table>

STORING FROZEN FOOD
NOTE: For more information on how to prepare food to be frozen such in a way to see the period they can be stored consult a frozen food guide or cook book.

Packaging
A great freezing depends on how great you package the food. When you seal the package make sure you remove all excess air and do not allow humidity. A package that is incorrectly sealed will result in the transmission of bad odors, contaminants inside your refrigerator and will
PACKAGING RECOMMENDATIONS:
- Use sealed plastic containers.
- Use plastic containers with a smooth surface.
- Package with aluminum foil of high resistance.
- Wrap with paper layered with plastic.
- Use water proof plastic.
- Use recommended plastic bags to store frozen foods.

Follow these packaging or container instructions in order to reach the best freezing.

DO NOT USE:
- Bread Wrapping.
- Plastic container not safe for storing.
- Containers without lids or seals.
- Wax paper or waxed plastic.
- Thin wrapping paper or not water proof.

FREEZING

IMPORTANT: Do not keep bottles in the freezer compartment; they may explode after freezing and cause damage.

For the maximum use of your freezer do not store excess food. Do not introduce a large amount of unfrozen foods that cannot be frozen within 24 hours (no more than 2 - 3 pounds or .91 kg - 1.36 kg of food per square inch of space in the freezer). Sufficient space must be left in order for the air to circulate properly around the packages. Leave enough space in order to close your refrigerator without difficulty.

Storage times can vary depending on the type and quality of the food, the way its package, or packaging container used, (in comparison to air and humidity), and the temperature it being stored in. Ice crystals formed inside your package are normal it indicates the air and humidity inside your package have condensed.

NOTE: Let warm foods cool off at room temperature for approximately 30 min, then wrap accordingly with the methods mention above and freeze. By letting your warm foods cool off before you introduce them to your freezer it will save you energy.

WARNING

SUFFOCATING DANGER
Adequate ventilation is required when using dry ice. Dry ice is Carbon Dioxide (CO₂). When it evaporates it produces oxygen, causing dizziness, slight headaches, unconsciousness or death. Do not inhale these vapors and properly ventilate the room while you use dry ice.

REFRIGERATOR SECTION

REFRIGERATOR SHELVES
The shelving of your refrigerator can be adjusted to comply with your storage necessities; Depending on the model you have in can include glass shelving or wired shelving. The storing of your foods together and adjusting the shelving to different heights will ease to help you locate what you need. This also helps your refrigerator to stay shut longer which will save you energy.

IMPORTANT: While your refrigerator glass shelving are cold do not clean with hot or warm water. The glass shelving may break if exposed to rapid temperature changes or hard impacts. For your safety the glass shelving are made out of tempered glass so when at breaking they will fracture into tiny fragments.

NOTE: Be careful while moving or relocating the shelves they are heavy. If moving the shelves is required keep in mind to locate them in a safe environment to prevent them from breaking.

ADJUSTING SHELVES
Remove the shelves and adjust them to your convenience.

- REMOVING SHELVES
Incline the front of the shelf in the direction indicated by figure 1 and lift in the direction indicated by figure 2. Pull the shelf towards you.

- REPLACING SHELVES
Incline the front part of the shelf (1) and guide the shelf hooks towards the openings at the height desired. Then lower the front of the shelf (2) so the hooks can be inserted (3) in the shelf supports.

NOTE: Make sure that the shelf is installed in the horizontal manner. If not secured it can cause the shelves to fall, which will cause your stored food to spill.
USING YOUR REFRIGERATOR

Sliding Shelves (in some models)
You can slide some of the shelves in your refrigerator towards inside or outside like explained below.

- To slide the shelf towards the outside: Pull towards you, figure A.
- To slide the shelf towards the inside: Push until it stops, figure B.

![Figure A](image)
![Figure B](image)

In order to remove a shelf from a metal frame
- Pull the shelf until it stops.
- Incline the front of the shelf towards the top and pull forward.
- Lift the shelf in the manner it moves across the support openings.
To put back into place just reverse these steps.

Functional Shelves (Folding Shelves, in some models)
You can store tall articles like gallons or bottles just by simply folding the shelf in half.

![Functional Shelves](image)

CRISPER HUMIDITY CONTROL (in some models)
You can control the amount of humidity in the moisture-sealed crisper. Adjust the control to any setting between HIGH and LOW.
- "High": keeps moist air in the crisper for best storage of vegetables.
- "Low": lets moist air out of the crisper for best storage of fruits.

![Crisper Humidity Control](image)

To remove or replace the crisper:
- To remove, slide the crisper out to full extension.
- Lift the front of the crisper up, then pull it straight out.
- To install, slightly tilt up the front and insert the drawer into the frame and push it back into place.

**CAUTION:** Be careful when you handle the glass cover because it could loose.

To remove or replace Glide’N’Serve drawer
1. To remove, pull the drawer out to full extension.
2. Lift the front of the drawer up, then pull it straight out.
To install, slightly tilt up the front and insert the drawer into the frame and push it back into place.

**NOTE:** Removing the fixed door bin is recommended to reduce the risk of door bin scratches.

![Glide’N’Serve Drawer](image)

To remove the glass:
- Lift up the glass under the crisper cover.
- Pull the glass up and out.

**NOTE:** Remove glass before removing the crisper cover support.
- While holding the crisper cover support with both hands (as shown in the image below), pull forward and slightly lift the front part.
Glide’N’Serve (In some models).

The Glide’N’Serve provides storage space with a variable temperature control that keeps the compartment colder than refrigerator. This drawer can be used for large party trays, deli items, or beverages.

**Selection Button**

- When "MEAT" is selected, the temperature of the Glide’N’Serve can be kept around 34°F (1°C). This feature helps keep meat or fish fresh for a longer time. The Glide’N’Serve temperature can be maintained under recommended temperature setting Freezer: 0°F (-18°C), Refrigerator: 37°F (3°C).

- When "DELI" is selected, the temperature of the Glide’N’Serve can be kept around 38°F (3°C). This feature helps keep food fresh for a longer time. The Glide’N’Serve temperature can be maintained under recommended temperature setting Freezer: 0°F (-18°C), Refrigerator: 37°F (3°C).

- When "PRODUCE" is selected, the temperature of the Glide’N’Serve can be kept around 41°F (5°C). This feature helps keep food fresh for a long time. The Glide’N’Serve temperature can be maintained under recommended temperature setting Freezer: 0°F (-18°C), Refrigerator: 37°F (3°C).

**DOOR RACKS**

The door racks are removable for easy cleaning and adjusting.

- To remove the rack, simply lift the rack up and pull straight out (1).
- To replace the rack, slide it in above the desired support button and push down until it stops (2).

**WARNING:** Somebody can be hurt if door racks are not firmly assembled.

**CAUTION:** DO NOT allow children to play with baskets. Sharp corners on baskets could cause injury.

**NOTE:** DO NOT adjust a rack that is loaded with food.

**DAIRY COMPARTMENT** (in some models)

- To remove the dairy compartment, simply lift it and pull straight out (1).
- To replace the dairy compartment, slide it in above the desired location and push down until it stops (2).

**DISPENSER DRIP TRAY** (in some models)

The dispenser drip tray has no self-draining function. It should be cleaned regularly. Remove the cover by pressing and pulling the tray. Dry it with a cloth. To reinstall the tray, slightly tilt the front of the tray and snap the ribs into the holes.
FREEZER SECTION

ICE BIN (in some models)

To remove Ice Bin:
• Pull the drawer as much as possible (1).
• Raise the ice box and take it out carefully (2).

To reinstall Ice Bin:
• Take the drawer off as much as possible and put the ice bin in the right position.

![Image of Ice Bin]

DURABASE (in some models).

• Fully extend the freezer drawer. Lifting part and pull it up (1).
• To put it back, insert the Durabase in the rail assembly (2).

![Image of Durabase]

DURABASE DIVIDER (in some models)

Allows organizing the Durabase area in 2 sections.
For moving the divider, just move it in the direction that you want.

![Image of Durabase Divider]

WARNING: In order to prevent accidents, such as suffocation, DO NOT let children and pets play inside the durabase.

WARNING: There is enough space for the children to play.

Pull-Out Drawer

To remove the drawer, push drawer to the back over the stoppers until it stops, gently lift the rear left and right sides of the drawer and pull it out.

![Image of Pull-Out Drawer]

To reinstall, pull out and fully extend both rails. Insert the end of rib in the bracket at left and right. Making sure that the guides at the front are lined up properly, gently push down on both sides.
The refrigerator, as well as the freezer, do their own de-freezing. This process does not prevent the build up of contaminants, therefore it is suggested that you clean both parts once a month; clean spilled liquids immediately.

REFRIGERATOR CLEANING
- Unplug your refrigerator.
- Pull out all of the removable parts (such as the vegetable and dairy doors).
- Use a clean sponge (or a soft rag) and use it with lukewarm water mixed with detergent. Do not use abrasive or concentrated cleaners.
- Hand wash it, and dry it thoroughly.
- Plug the refrigerator back in.

OUTSIDE
Wax the outside in order to create better protection. Make sure you use a product specifically design to be used for electro-domestic products (car wax is acceptable). Use a clean, soft rag, and perform this task twice a year. For metal-made refrigerators, do not wax, simply clean it with water and detergent. Do not use concentrated or abrasive products.

NOTE: Avoid the usage of chemical products that contain phosphates or bleach.

INSIDE (Allow freezer to slightly warm up a small degree to prevent cloth from sticking)
In order to eliminate bad odors, clean the inside of the refrigerator with a mixture of baking powder and lukewarm water (one teaspoon of baking powder per cup of water). Ensure that the powder dissolves thoroughly in order to prevent any sort of damage.

DOOR LINING AND GASKETS
Use only a mild detergent (such as dish soap).

PLASTIC PARTS (Covers and Panels)
Do not use abrasive, paper or rough products. These could damage the product.

NOTE: Back Cover should only be removed by a qualified technician.

In order to get an efficient performance of your refrigerator, clean the back cover of it at least twice a year.

REPLACING REFRIGERATOR LIGHTS
NOTE: The interior lighting for refrigerator uses LED lighting.
DO NOT try to change any LED module. LED lighting should only be replaced by qualified technician.
POWER INTERRUPTIONS
1. In case of a black out, call your electric company and ask how long it will last.
2. In case of a 24 hour or less black out, do not open the refrigerator; this will keep the food fresh.
3. In case of a longer black out, do one of the following options:
   • Pull out all of the frozen food and keep them in an ice chest.
   • Put 2 lbs (907 g) of frozen ice (make sure you use gloves) for each square foot (28 L) inside the freezer. This task will preserve the food from 2 to 4 days.
   • In case you do not possess neither ice chest or dry ice, consume your food as soon as possible.

REMEMBER: In a power failure, a full freezer stays cold longer than a partially filled one. A freezer full of meat stays cold longer than a freezer full of baked goods. If you see that food contains ice crystals, it may be safely refrozen, although the quality and flavor may be affected. If the condition of the food is poor or if you feel it unsafe, dispose of it.

WHEN MOVING
If you decide to take your refrigerator with you when moving, consider the following:
1. Remove all of the food from it, and place the frozen food in an ice chest with dry ice.
2. Unplug your refrigerator.
3. Empty the water from its tray.
4. Clean and dry it with a rag.
5. Pull out all of the removable parts, and wrap them with adhesive tape.
6. Depending on the model of the refrigerator, lift the top part of the refrigerator so it can roll with ease, or screw the levelers so it won't scratch the floor. Consult to the section “Closing and Aligning Doors”.
7. Keep the doors closed with the cable glued to the refrigerator cabinet with an adhesive tape.

When your refrigerator arrives to your home, put everything back into place and read the section “Refrigerator Installation” in order to obtain installation preparation. In case your refrigerator has a factory ice maker, remember you have to reconnect the water supply.

WHEN GOING ON VACATION
If you decide to leave your refrigerator on when going away, consider these steps:
1. Consume all of the perishable items and freeze the rest.
2. Empty the ice bin.

If you decide to leave your refrigerator off:
1. Remove all of the food.
2. Unplug your refrigerator.
3. Clean and dry it well.
4. Make sure the doors stay open (use blocks or tape) in order to prevent bad odors and fungi from happening.
REPLACING THE WATER FILTER

It is recommended that you replace the filter approximately every 6 months, when the water filter indicator reaches 0 months, or when the ice and water dispenser noticeably decreases output.

Remove the old cartridge.

1. Press the push button to open the filter cover.
   **NOTE:** Replacing the filter causes a small amount of water (around 1 oz. or 25 cc) to drain. Place a cup under the filter hole to catch any waste.

2. Pull the cartridge downward.

3. Pull out the filter cartridge.
   **NOTE:** When opened at a full angle the cartridge should easily come out.
REFRIGERATOR CARE AND CLEANING

REPLACING THE WATER FILTER

Replace with a new cartridge.

1. Take the new cartridge out of its packing and remove the protective cover from the o-rings. With cartridge ears in the horizontal position, push the new filter cartridge into the manifold hole until it stops.

2. Firmly lock in the cartridge. The cover will click back into place.

NOTE: After replacing the filter, flush 2.5 gallons through filter before use (flush for approximately 5 minutes). Check the filter for leaks.

When the water filter indicator displays the message O Filter Month, hold 3 seconds. Reset the water filter status display and indicator light by pressing and holding the LIGHT / WATER FILTER button for at least 3 seconds.

NOTE: Filter Bypass Plug
Keep the filter bypass plug. You must use the filter bypass plug when a replacement filter cartridge is not available. The icemaker will not operate without the filter or filter bypass plug inserted in the proper compartment.

To purchase replacement water filter cartridges, visit your local appliance dealer or parts distributor, or refer to the warranty card to obtain the telephone number of the service center near to you.

You can also call:
USA 1-800-243-0000
CANADA 1-888-LG CANADA
(24 hours per day/7 days per week).

The replacement water filter cartridge’s part number is ADQ36006101.

---

**WARNING**

To reduce the risk associated with ingestion of contaminants: Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before and after the system. Systems certified for cyst reduction may be used on disinfected water that may contain filterable cysts. EPA Establishment Number 10350-MN-005

**CAUTION**

To reduce the risk associated with property damage due to water leakage:

- **Read and follow.** Use instructions before installation and use of this system.
- Installation and use MUST comply with all state and local plumbing codes.
- **Do not install** if water pressure exceeds 120 psi (827 kPa). If your water pressure exceeds 80 psi, you *must* install a pressure limiting valve. Contact a plumbing professional if you are uncertain how to check your water pressure.
- **Do not install** where water hammer conditions may occur. If water hammer conditions exist you must install a water hammer arrester. Contact a plumbing professional if you uncertain how to check for this condition.
- **Do not install** on hot water supply lines. The maximum operating water temperature of this filter system is 100°F (38°C).
- **Protect filter from freezing.** Drain filter when temperatures drop below 40°F (4.4°C).
- The disposable filter cartridge must be replaced every 6 months, at the rated capacity or if a noticeable reduction in flow rate occurs.
State of California
Department of Public Health

Water Treatment Device Certificate Number
09 - 2018

Date Issued: December 15, 2009

Trademark/Model Designation: ADQ36006101-S
Manufacturer: Cuno Inc.
Replacement Elements: ADQ36006101

The water treatment device(s) listed on this certificate have met the testing requirements pursuant to Section 116830 of the Health and Safety Code for the following health related contaminants:

Microbiological Contaminants and Turbidity

Organic Contaminants
2,4-D Reduction
Atrazine
Benzene
Carbafuran
Lindane
p-Dichlorobenzene
Toxaphene

Inorganic/Radiological Contaminants
Lead
Mercury

Rated Service Capacity: 200 gal
Rated Service Flow: 0.5 gpm

Conditions of Certification:
CONNECTING THE WATER LINE

BEFORE START

The water source is not guaranteed by the refrigerator manufacturer. Follow instructions carefully in order to reduce damage.

Air located inside the water pipes can cause hammering or tapping causing damage to the inner pipes or water spillage in the inside of the refrigerator. Call a qualified plumber to fix such hammering on the connections before installing the water pipe.

To avoid burn damage or such, never connect refrigerator to hot water pipes.

If you are to use the refrigerator before connecting it to the water source, make sure the ice maker is the off position.

Never attempt to install the ice maker pipes in areas where room temperature is below freezing point.

When using any electrical device (like a drill) during the installation, make sure device is doubly isolated or making ground to prevent risk of electrical surge or discharge.

All installations should be done considering local water and drainage requirements.

- If an inverted osmosis water filtration system is connected to the cold water source, the water hose installation is not assured or guaranteed by the refrigerator or automated ice maker manufacturer. Follow the next instructions carefully to minimize costly water related damages.
- When having an inverted osmosis water filtration system connected to the cold-water flow, the water pressure for such system must be at least between 40-60 PSI or 0.27 MPa (2.8 kg · f / cm² – 4.2 kg · f / cm², (2.8 kg · f / cm² – 4.2 kg · f / cm², less than 2 – 3 seconds to fill a 7 oz of capacity cup [0.2 liters]).
- If the inverted osmosis water filtration system pressure is less than 21 PSI or 0.14 MPa (1.5 kg · f / cm², more than four (4) seconds to fill a 7 oz of capacity cup [0.2 liters]);
  a) Identify if the sediments filter in the inverted osmosis system is being blocked. Replace filter if necessary.
  b) Allow inverted osmosis system storage tank to refill after extensive usage.
  c) Call a qualified plumber if the inverted osmosis water pressure problem continues.

REQUIREMENTS

- 1/4in (6.35 mm) in diameter copper pipe to connect refrigerator to the water pipe. Make sure both terminals are cut in squared manner.

To determine how much pipe material is needed, measures the distances between the valves located behind the refrigerator and the source of water and add to that 8 feet (2.4 m). Make sure there is sufficient pipe material to allow the free movement of the refrigerator from the wall.

- **A cold water source.** Water pressure should be between 0.138 and 0.82 MPa or 20 and 120 PSI for models not containing water filter and between 0.276 and 0.82 MPa or 40 and 120 PSI for models containing water filter.

- **A drill.**

- **Adjustable 1/2 in (12,7 mm) key.**

- **Flat and Phillips style (star) screwdriver.**

- **Two 1/4 in (6.35 mm) diameter compression nuts with two sides to connect the copper pipe to the refrigerator valve.**

If your current copper pipe has some reduction on the ends, it will be necessary to get and adaptor (found in hardware stores) to connect the water line to the refrigerator. It is also possible to cut such reductions with a pipe cutter and use the compression connections mentioned above.

- **Bypass valve** to connect to the cold water line. The valve must have a water opening with an interior 5/32 in (3.46 mm) diameter in the cold-water connection point. These valves can be located in any cold-water connection package. Before buying make sure such valve meets local standards and requirements.

**INSTALLATION INSTRUCTIONS**

Install the valve to the pipe that you use to drink water. (Connect only to a potable water source).

⚠️ CAUTION: Connect to potable water supply only.

1. **CLOSE THE MAIN WATER SOURCE**
   Open the nearest water faucet to let water flow and empty pipes.

2. **SELECT THE LOCATION OF THE VALVE**
   Select the location of the valve that will provide a better access. It is best to connect to a vertical pipeline. When connecting to a horizontal pipeline is necessary, make the connection in the lateral or upper area instead of the lower area to prevent accumulation of sediment.
3. DRILL A HOLE FOR THE VALVE
Drill a 1/4" (6.35 mm) diameter hole in the water pipeline. Remove jagged edges produces after perforation. Make sure water does not reach the drill. Not performing the 1/4" (6.35 mm) perforation can lead to a low or smaller ice production.

4. TIGHTEN THE VALVE
Tight the valve into the cold water pipeline with a tube trap.

NOTE: Codes for 248 CMR pipelines of the state of Massachusetts must be attached to the connection. Valves of this type are banned in Massachusetts. Call an authorized plumber.

5. TIGHTEN THE TRAP
Tighten the trap until the sealing ring begins to grow.

NOTE: Make sure it is not too tight, this can break the pipe.

6. PLACE THE PIPELINE
Place the pipeline between the cold water pipe and the refrigerator. Place it through a hole in the wall or floor (behind the refrigerator or next to the cabinet) as close to the wall as possible.

NOTE: Make sure there is a sufficient amount of extra pipeline (8 feet [244 mm] coiled up three times with a 10" [25 cm] in diameter) to allow free movement of the refrigerator from the wall after installation was made.

7. CONNECT PIPELINE TO VALVE
Place the compression nut and the copper pipe ferule at the end of the pipe and connect to the valve. Make sure the pipe is completely inserted into the valve. Tighten nut carefully.

NOTE: Codes for 248 CMR pipelines of the state of Massachusetts must be attached to the connection. Valves of this type are banned in Massachusetts. Call an authorized plumber.

8. DRAIN THE PIPE
Open the main water source (1) and drain the pipe until water comes out clear.

Allow water flow from the bypass valve (2) and close after draining 1/4 of a gallon (1L) of water.

9. CONNECT PIPE TO REFRIGERATOR
NOTES:
- Before making connection to refrigerator, make sure it is not connected to any energy source. If your refrigerator does not have a water filter, it is advised to install one.
- If your water source contains sand or related particles that can travel to the valve, install a water filter near the refrigerator.

IMPORTANT: Never use old or used hoses. Always use new ones to have a better use and experience. Connect always to a potable water source to avoid security and health issues.
CONNECTING THE WATER LINE

- Remove the ring plug (1) from the valve located at the top of such device.

- Place compression nut and the ferule at the end of the pipeline. Insert pipeline into the connection valve as far as possible. Hold tightly while holding pipeline.

11. CONNECT TO REFRIGERATOR
Fix pipeline in a way that it does not vibrate on the refrigerator or wall. Push refrigerator against wall.

12. TURN ICE MAKER ON
Turn ice maker switch into the ON position. Ice maker will start only after reaching its operating temperature of 15 °F (-9 °C) or less. It will automatically begin the ice production if switch is located in the ON position.

Hold on to the pipe from the handles or grabbers located behind the refrigerator, loosing first the bolt holding the handle. Afterwards, insert pipe into the hole and tighten bolt to finalize.

10. OPEN THE BYPASS VALVE
Tighten all connections containing leaks. Place access cover back on compressor.
UNDERSTANDING SOUNDS YOU MAY HEAR

Your new refrigerator might produce certain noises that your previous refrigerator did not. It is normal if you worry. Most of the new sounds you will be hearing are actually normal and expected. Hard surfaces like walls or floor can increase sounds and make them sound louder than they really are. The following list has a description of such sounds along with their causes.

- Your refrigerator is designed to work efficiently to preserve your food at the desired temperature using the least of energy. You will be able to hear a pulsing sound coming from the ventilators and the evaporator. The speed of the ventilator can speed up when you open the refrigerator door.

- After each cycle you will hear a dripping sound due to the refrigerant liquid in your refrigerator.

- Contraction and expansion of the inner walls can cause a slight popping sound.

- You will hear a dripping sound caused during the thawing cycle.

- During the defrosting cycle the water might cause a dripping sound.

- You can hear some tight air sound over the capacitor caused by the fan.

- Running water can be heard during the defrosting cycle.

- Due to its low energy consumption design of the refrigerator; the fans will remain off, while the on-off switch activated the internal light of bin.

- The thawing timer will make a "click" sound when such timer will start and finish. Temperature controlling device will also make a "click" sound at the beginning and ending of the refrigerator cycle.

- You will hear a bell sound caused by the flow of the refrigerant, water pipe or objects located on the superior part of the refrigerator.

</table>

<table>
<thead>
<tr>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>• You need to adjust the leveling screws due the floor is unlevelled or weak. Read the <strong>Installation</strong> section.</td>
</tr>
<tr>
<td>• Modern refrigerators with a bigger storage capacity require longer periods of operation.</td>
</tr>
<tr>
<td>• The motor will continue working when the room temperature is high. The motor might be on between 40% or 80% of the time. In high temperature conditions, the capacitor might run on periods of time.</td>
</tr>
<tr>
<td>• When adding or opening the door of the refrigerator, it warms it up. It’s normal that the refrigerator to run more that usual in order to cool the bins. (Read the section <strong>Food Storage Guide</strong>). To save energy, take what you need at once, order your food in order so it can be easily found and close the door immediately soon after you took out the food.</td>
</tr>
<tr>
<td>• The refrigerator will take 24 hours to cool down completely.</td>
</tr>
<tr>
<td>• Push firmly the Doors. If they don’t close. Read <strong>Doors will not close completely</strong> below.</td>
</tr>
<tr>
<td>• This will stop the air transfer and marked the motor to work longer and harder. Clean the pipes of the condenser.</td>
</tr>
<tr>
<td>• Read <strong>Refrigerator Installation</strong> section to level refrigerator.</td>
</tr>
<tr>
<td>• Adjust the food bins in order to free space between the doors and the shelves.</td>
</tr>
<tr>
<td>• Push the containers and place the vegetable cover lid, the panels, shelves and any other container or bin in their right positions. Read the section <strong>Using your Refrigerator</strong>.</td>
</tr>
<tr>
<td>• Clean the seal rings and the surface they might be in contact with. Use a piece of cloth with a small amount of paraffin and apply it over the seal rings.</td>
</tr>
<tr>
<td>• Level the refrigerator. Read the section <strong>Closing and Aligning the Doors</strong>.</td>
</tr>
<tr>
<td>• Remove and place again the door according to the section <strong>Refrigerator Doors: How to remove and reverse</strong>.</td>
</tr>
<tr>
<td>• Read <strong>Doors Will not Close Completely</strong> already mentioned.</td>
</tr>
<tr>
<td>• When the door is opened, warm, humid air is allowed in the freezer resulting in frost.</td>
</tr>
<tr>
<td>• Don’t use the first ices made.</td>
</tr>
<tr>
<td>• Dispose of that old ice and make new.</td>
</tr>
<tr>
<td>• Pack again the food because it can transfer odors and tastes to the ice.</td>
</tr>
<tr>
<td>• You might need to install a filter in order to eliminate the odors and taste problems.</td>
</tr>
<tr>
<td>• Read the section <strong>Refrigerator Care and Cleaning</strong>.</td>
</tr>
<tr>
<td>• Empty the bin and discard the old ice cubes.</td>
</tr>
<tr>
<td>Problem</td>

SMART DIAGNOSIS™
(In some models).

Should you experience any problems with your refrigerator, it has the capability of transmitting data via your telephone to the LG service center. This gives you the capability of speaking directly to our trained specialists. The specialist records the data transmitted from your machine and uses it to analyze the issue, providing a fast and effective diagnosis.

If you experience problems with your refrigerator, call 1-800-243-0000 (1-888-542-2623 for LG Canada). Only use the Smart Diagnosis™ feature when instructed to do so by the LG call center agent. The transmission sounds that you will hear are normal and sound similar to a fax machine. Smart Diagnosis™ cannot be activated unless your refrigerator is connected to power. If your refrigerator is unable to turn on, then troubleshooting must be done without using Smart Diagnosis™.

Using Smart Diagnosis™
First, call 1-800-243-0000 (1-888-542-2623 for LG Canada). Only use the Smart Diagnosis™ feature when instructed to do so by the LG call center agent.

1. Lock the display. To lock the display, press and hold the Door / Alarm Lock button for three seconds. (If the display has been locked for over five minutes, you must deactivate the lock and reactivate it).

2. Open the right refrigerator door.
3. Hold the mouthpiece of your phone in front of the speaker that is located on the right hinge of the refrigerator door, when instructed to do so by the call center.

4. Press and hold the Freezer Temperature button for three seconds while continuing to hold your phone to the speaker.

5. After you hear three beeps, release the Freezer Temperature button.
6. Keep the phone in place until the tone transmission has finished. This takes about 15 seconds, and the display will count down the time. Once the countdown is over and the tones have stopped, resume your conversation with the specialist, who will then be able to assist you in using the information transmitted for analysis.

NOTE
- For best results, do not move the phone while the tones are being transmitted.
- If the call center agent is not able to get an accurate recording of the data, you may be asked to try again.
LG ELECTRONICS U.S.A., INC.
LG REFRIGERATOR LIMITED WARRANTY - U.S.A.

Should your LG Refrigerator ("Product") fail due to a defect in materials or workmanship under normal home use, during the warranty period set forth below, LG will at its option repair or replace the product. This limited warranty is valid only to the original retail purchaser of the product and applies only when purchased and used within the United States including U.S. Territories. Proof of original retail purchase is required to obtain warranty service under this limited warranty.

Noises associated with normal operation and failure to follow instructions found in the use and care and installation guides or operating the unit in an unsuitable environment will not be covered under this warranty.

- Replacement products and parts are warranted for the remaining portion of the original warranty period or ninety (90) days, whichever is greater.
- Replacement products and parts may be new or re-manufactured.

THIS WARRANTY IS IN LIEU OF ANY OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT ANY IMPLIED WARRANTY IS REQUIRED BY LAW, IT IS LIMITED IN DURATION TO THE EXPRESS WARRANTY PERIOD ABOVE. NEITHER THE MANUFACTURER NOR ITS U.S. DISTRIBUTOR SHALL BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR PROFITS, OR ANY OTHER DAMAGE WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE. Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you. This warranty gives you specific legal rights and you may also have other rights that vary from state to state.

THIS LIMITED WARRANTY DOES NOT COVER:

1. Service trips to deliver, pick up, install, or repair the product; instruct the customer on operation of the product; repair or replace fuses or correct wiring or plumbing, or correction of unauthorized repairs/installation.
2. Failure of product to perform during power failures and interruptions or inadequate electrical service.
3. Damage caused by leaky or broken water pipes, frozen water pipes, restricted drain lines, inadequate or interrupted water supply or inadequate supply of air.
4. Damage resulting from operating the product in a corrosive atmosphere or contrary to the instructions outlined in the product owner’s manual.
5. Damage to the product caused by accidents, pests and vermin, lightning, wind, fire, floods, or acts of God.
6. Damage resulting from misuse, abuse, improper installation, repair, or maintenance. Improper repair includes use of parts not approved or specified by LG.
7. Damage or failure caused by unauthorized modification or alteration, or if it is used for other than the intended purpose, or any water leakage where the unit was not properly installed.
8. Damage or failure caused by incorrect electrical current, voltage, or plumbing codes, commercial or industrial use, or use of accessories, components, or consumable cleaning products that are not approved by LG.
9. Damage caused by transportation and handling, including scratches, dents, chips, and/or other damage to the finish of your product, unless such damage results from defects in materials or workmanship and is reported within one (1) week of delivery (Call: 1-800-243-0000).
10. Damage or missing items to any display, open box, discounted, or refurbished product.
11. Products with original serial numbers that have been removed, altered, or cannot be readily determined. Model and Serial numbers, along with original retail sales receipt, are required for warranty validation.
12. Increases in utility costs and additional utility expenses.
13. Replacement of light bulbs, filters, or any consumable parts.
14. Repairs when your product is used in other than normal and usual household use (e.g. commercial use, offices, and recreational facilities) or contrary to the instructions outlined in the product owner’s manual.
15. Costs associated with removal of your product from your home for repairs.
16. The removal and reinstallation of the product if it is installed in an inaccessible location or if it is not installed in accordance with published installation instructions, including LG’s owner’s and installation manuals.
17. Shelves, door bins, drawers, handles, accessories, and other parts besides those that were originally included with this particular model.

The cost of repair or replacement under these excluded circumstances shall be borne by the consumer.
